SUPPLEMENTARY APPENDIX 4: Search Strategies

2021 American College of Rheumatology/Vasculitis Foundation Guideline for the Management of Giant Cell Arteritis and Takayasu Arteritis

SEARCH DATE PARAMETERS: Original search covered 01/01/1925 to 06/21/2018; Update from 6/21/2018 to 7/1/2019 covered all topics; an additional, targeted GPA search was done 7/14/2020. English language limits are applied within the search strategies.

NOTE: The Cochrane Library database was searched and results included for the original search but not the update. The reason is that the search strategy was lost when Cochrane transitioned to a new interface.

Syntax Guide for PubMed	
[MeSH] = Medical Subject Heading	[Text Word] = Includes all words and numbers in the title, abstract, other abstract, MeSH terms, MeSH Subheadings, Publication Types, Substance Names, Personal Name as Subject, Corporate Author, Secondary Source, Comment/Correction Notes, and Other Terms - typically non-MeSH subject terms (keywords)…assigned by an organization other than NLM
[MeSH subheading] = a Medical Subject Heading subheading, e.g., drug therapy	[Title/Abstract] = Includes words in the title and abstracts
mh:noexp = a command to retrieve the results of the Medical Subject Heading specified, but not narrower Medical Subject Heading terms	
Boolean Operators	
OR = retrieves results that include at least one of the search terms	AND = retrieves results that include all the search terms

NOT = excludes the retrieval of terms from the search

Syntax Guide for Embase	
/exp	Explode. Includes Embase subject headings and the narrower terms in the hierarchy.
ti,ab	Includes words in the title or abstracts
de	Includes words in Embase subject headings
Boolean Operators	
OR = retrieves results that include at least one of the search terms	AND = retrieves results that include all the search terms
NOT = excludes the retrieval of terms from the search
