

Lightweight Compact Binoculars

(KC619)

The following instructions were provided by the manufacturer.

Holding your binoculars

Grasp each barrel firmly and move the barrels closer together or further apart until you see a single circle of view. Always return your binoculars to this position before using.

Focusing

1. Close your right eye and sight an object with your left eye. Focus the binocular by rotating the centre focusing wheel until the image is sharp and clear.
2. Open your right eye and now close your left eye. Rotate the right eyepiece until the object sighted is sharp and clean (note the setting of the diopter scale for future use).
3. Both sides (eyes) are now in focus and you will need to use only the centre focusing wheel to focus on other objects.

Fold-down eyecups

When using your binoculars with spectacles fold down the eyecups for more comfortable viewing.

Caring for your binoculars

Always protect your binoculars from accidental knocks and do not expose to excessive moisture or heat.

Blow away any dust or debris on the lens (or use a soft lens brush). To remove dirt or fingerprints, clean with a soft cotton cloth rubbing in a circular motion. Use of a coarse cloth or unnecessary rubbing may scratch the lens surface and eventually cause permanent damage.

For a more thorough cleaning, photographic type lens cleaning fluid may be used but always apply the fluid to the cleaning cloth. Never directly on the lens.
