Spring Plate Mounting Template

Use this template to mark the screw hole locations for mounting the spring plate onto your bed frame.

On the template, draw a horizontal line to represent the thickness of your cabinet door and a vertical line to represent the thickness of your headboard, plus any amount the cabinet door will overhang the bed frame. Cut the template along these lines.

Note: *The example noted with dashed lines has a 3/4" thick cabinet door, a 5/8" thick headboard with 1 1/8" cabinet door overhang.*

These two lines correspond to the bottom and headboard edges of your bed rails. Clamp the two bed rails together, apply the template and drill through both rails at the same time.
