 **Caution:** Always wear safety glasses when using this knife. Blades are **extremely** sharp. Handle with care. Wear gloves to protect hands. Close or cover blades when not in use. **Do not** bend blades. Lateral pressure can cause blades to snap and may result in serious injury.

Be careful when inserting and removing blades. The magnetic end cap holds and protects up to six blades.

**Do not** apply lateral pressure when using this knife or the blade may snap. Blades are **not** meant for chip carving in hardwoods or for large stock removal, but rather for fine detail work achievable because of the thin, razor-sharp blades.

For maximum comfort,  
orient blade vertically  
as shown.

### Replacement Blades

Blades can be honed many times before replacement. Replacement blades are available in packs of 10 per style; each blade is sealed in foil. Save the foil packs for safe blade disposal. To sharpen blades, we recommend our honing compound (05M08.01) or PSA-backed micro-abrasive applied to a wooden paddle.
