Morningstar's quarterly KiwiSaver Survey is designed to help New Zealand investors assess the past performance and other key characteristics of their KiwiSaver superannuation options. The accompanying tables show KiwiSaver fund returns for the three months and one, three, five, and 10 years to June 30 2025.

Key Takeaways

KiwiSaver assets increased, ending the quarter at close to NZD 130 billion rising almost \$9b due to a combination of strong market returns across the board, and inflows.

- Average multisector category returns for the June quarter ranged between 2.1 percent for conservative and 5.6 percent for aggressive category.
- Over one, three, five and ten years risk continues to be rewarded with the more growth assets in the category the more it has returned

Market Commentary

New Zealand Economic Commentary: Q2 2025 for Investors

As we reflect on the second quarter of 2025, the New Zealand economy is navigating a period of gradual recovery, marked by easing inflationary pressures and a Reserve Bank (RBNZ) that remains attentive to both domestic and global developments. For New Zealand investors, understanding these dynamics is crucial for informed decision-making across various asset classes.

Key Economic Indicators

Gross Domestic Product (GDP): The New Zealand economy showed signs of a slow but steady recovery in the March 2025 quarter, with GDP expanding by 0.8% quarter-on-quarter. This followed a 0.5% rise in the December 2024 quarter, indicating a positive trend after a period of contraction. However, the annual GDP for the year ended March 2025 still showed a contraction of 1.1%, highlighting that the recovery is nascent and building momentum.

Inflation (Consumer Price Index - CPI): Inflation continued its downward trajectory, albeit with a slight uptick in Q2 2025. The annual CPI rose to 2.7% in the June 2025 quarter, up from 2.5% in Q1, but importantly, it remained within the RBNZ's target band of 1.0% to 3.0%. On a quarterly basis, CPI increased by 0.5% in Q2, a moderation from the 0.9% rise in Q1. Key contributors to price increases included housing rents, local authority rates, and electricity prices. This sustained presence within the target band provides the RBNZ with greater flexibility in its monetary policy decisions.

Monetary Policy and Interest Rates

The Reserve Bank of New Zealand (RBNZ) continued its easing cycle in Q2 2025, cutting the Official Cash Rate (OCR) to 3.25% in May. This marked the sixth consecutive rate cut, reflecting the RBNZ's commitment to supporting economic activity as inflation moderates. While the RBNZ held the OCR at 3.25% in its July statement (just after Q2), its dovish forward guidance suggests a willingness to implement further cuts if inflationary pressures continue to ease as projected. This lower interest rate environment is a significant factor influencing borrowing costs and investment returns.

Global Context and Risks

The global economic landscape continues to present both opportunities and challenges. Global growth is anticipated to weaken in the latter half of 2025, influenced by the uncertain impacts of trade protectionism and ongoing geopolitical instability, particularly in the Middle East, which could reignite global inflationary pressures. The strengthening US dollar, following the Federal Reserve's decision to hold rates steady, has contributed to a weakening of the New Zealand dollar. Escalating trade tensions and shifting global supply chains also pose risks, potentially constraining export volumes and business investment in trade-exposed industries. The IMF projects global economic growth at a modest 2% over the next two years.

Investment Implications for New Zealand Investors

Equities: The New Zealand equity market (S&P/NZX 50 Index) posted a 2.8% gain in Q2 2025, recovering from an initial dip. This performance, while positive, trailed stronger returns seen in international shares (+9.3% hedged to NZD) and Australian shares (+7.4%). The RBNZ's rate cuts and improving domestic sentiment are supportive factors for local equities.

Fixed Interest: Both international and New Zealand fixed interest markets delivered positive returns in Q2, with gains of 1.2% and 1.3% respectively. The general trend of lower interest rates has supported bond prices, although yield curves steepened marginally.

Property: The residential property market, while still recovering, is showing increased activity among first-home buyers. The declining interest rate environment and recent government policy changes (such as restoring mortgage interest deductibility for rentals) are expected to bolster investor demand in the medium term. Investors may find opportunities as the market gradually gains momentum.

Currency (NZD): The New Zealand dollar has faced headwinds due to the stronger US dollar and global economic uncertainties. Forecasts suggest the NZD/USD pair may hover around 0.58 in Q3 2025. Investors with international holdings should consider the impact of currency fluctuations on their unhedged returns.

Fund Manager Results

Most Multi-Sector KiwiSaver funds produced positive returns over the June quarter. As for default funds all funds with the notable exception of Fisher Funds (2.3) returned over 4 percent - However it is worth noting that Fisher Funds default fund is marginally the strongest performer for the trailing one year and is middle of the pack over three years.

Generate, Quay Street, Milford and Westpac have produced some strong performances across many risk profiles for the quarter

It is most appropriate to evaluate performance of a KiwiSaver scheme by studying its long-term returns. Over 10 years, the aggressive category average has given investors an annualized return of 8.6%, followed by growth (7.8%), balanced (6.4%), moderate (4.6%), and conservative (4.1%).

Furthermore, the Global Sustainability Rating was added to the survey in 2023, displaying funds with four and five globe ratings received. The Morningstar Sustainability Rating is designed to support investors in evaluating the relative environmental, social, and governance risks within portfolios.

Market Share

KiwiSaver assets on the Morningstar database rose strongly during the June quarter to 129.1 billion. ANZ leads the market share with almost NZD 22 billion. ASB is in second position, with a market share of 14.6%. Then goes Fisher. Milford and Westpac round out the big five. The five largest KiwiSaver providers account for approximately 66% of assets in our database, or around 83 billion dollars under management. We estimate these five providers will deduct more than 680 million dollars in fees in 2025 from KiwiSaver members, at an average fee of around 0.82 of a cent per dollar invested. This mirrors the overall market fee levels in terms of average dollar invested.

About This Survey

This survey groups KiwiSaver options according to their mix of income and growth assets, or "asset allocation." This is one of the most important decisions to make when saving for retirement. The term "income assets" refers to cash and fixed interest securities that generally produce stable and reliable returns but offer little opportunity for long-term capital growth. Returns from "growth assets" such as property and shares can be volatile—as recent market conditions have demonstrated—but over time have shown greater capacity for increasing in value. The mixture of income and growth assets is the major determinant of potential return and volatility.

Investors may notice differences between the returns published in this survey and those they see elsewhere. There are several possible reasons for this. First, the returns published here are after fees but before tax. Second, we take the associated tax credit into consideration when calculating and publishing these returns, while some fund managers base their published performance figures on month-end unit prices only. ■■

Morningstar KiwiSaver Report: 30 June 2025

Snapshot

Please note:

- Past performance is not a guide to future performance. This year's best performers can easily be next year's worst.
- Understanding your risk profile, and the mix of growth and income assets is critical.
- Fees are the one constant that will always eat away at your returns. Take a close look at the cost of your KiwiSaver Scheme.

Fee Revenue Analysis Assumptions

These figures is calculated by simply mulplying the latest size reported to us, by the latest fee reported in the PDS. Its forward looking and may vary.

These fees have not yet been collected

This fee number includes the fund managers own estimates for their performance fees from their Product Disclosure Statement, in which they actually earn significantly more or less depending on their result.

This size is only an estimate, and can be different because of the size of the fund fluctuating through the year, and performance fee estimates

You should not use this data to assume what a fund company has earned in fees from KiwiSaver.

End of Year Historical Size Data

This is not the historical size of the overall market

This is an aggregation of the fund and firms that exist today, and where the fund sizes were.

This does not include any firms who have existed KiwiSaver

This will treat merged firms as one

03

Morningstar KiwiSaver Report: 30 June 2025
Notes

Undisclosed.

- * Performance numbers supplied directly from the provider rather than calculated independently by Morningstar.
- ** Mean rather than a Median.
- # Minimum fee up to \$40/50 depending on option is charged, inclusive of other costs.
- ## No member fee for balances below \$10,000, otherwise \$30.
- ### The Member Fee was removed effective 1 May 2019.

NZ Funds

NZ Funds have decided not to submit information to our database as of March 2020 and have been removed from the performance tables.

Estimated Fees = Fee X Latest Net Assets
