

Kiwi CatTools

Automate Network Configuration Management

SolarWinds® Kiwi CatTools® is a network automation tool designed to manage configurations on network devices such as routers, switches, and firewalls. It helps you work more efficiently by scheduling automatic backup activities and rolling out configuration changes to multiple devices simultaneously. With native support for devices from dozens of manufacturers, Kiwi CatTools helps simplify network administration, configuration change alerting, and backup management.

KIWI CATTOOLS AT A GLANCE

- **Schedule** automated network configuration backups
- **Perform bulk configuration changes** on multiple devices
- **Increase security** with configuration change alerting
- **Perform network device management** from one console
- **Compare device configurations** and analyze changes
- **Roll back network configuration** when needed

FEATURES

Schedule Automated Network Configuration Backups

Kiwi CatTools is designed to provide simplicity and automation to easily back up configuration from network devices. You can schedule backup activity for custom time intervals. Kiwi CatTools has a built-in TFTP server that also supports the backup activity via TFTP.

Perform Bulk Configuration Changes on Network Devices

With Kiwi CatTools, you can perform configuration changes on multiple devices simultaneously. Using the built-in TFTP server, you can apply configuration files to various devices. This makes it easy to roll back to a previous, good configuration.

Increase Security with Configuration Change Alerting

Constantly oversee network configuration changes. Kiwi CatTools detects and alerts on configuration changes and sends email notifications. This helps you to track unauthorized device configuration changes and security risks.

Generate Configuration and Device Information Reports

Kiwi CatTools provides many out-of-the-box reports in HTML and text file formats. It also supports sending these reports and statistics via email.

Compare Device Configurations and Analyze Changes

Kiwi CatTools lets you perform two types of configuration comparisons:

- Compare current device configurations with the most recent backup
- Compare running and startup configurations

You can view and analyze the results of a comparison on the console or generate a report.

Perform Network Device Management from One Console

Kiwi CatTools has many built-in “Activities” that allow you to manage and work on network devices without having to use the Command Line Interface (CLI). Issue commands from the easy-to-use Kiwi CatTools console, update a device’s password or banner, perform inter-device pings, [and more](#).

Multi-Vendor Device Support

Kiwi CatTools provides out-of-the-box support for IPv4 and IPv6 devices from industry-leading manufacturers, including Cisco®, HP®, Enterasys, F5®, Huawei®, Juniper®, Aruba®, Fortinet®, [and more](#).

ABOUT SOLARWINDS

SolarWinds is a leading provider of simple, powerful, secure observability and IT management software built to enable customers to accelerate their digital transformation. Our solutions provide organizations worldwide—regardless of type, size, or complexity—with a comprehensive and unified view of today's modern, distributed, and hybrid network environments. We continuously engage with IT service and operations professionals, DevOps and SecOps professionals, and database administrators (DBAs) to understand the challenges they face in maintaining high-performing and highly available hybrid IT infrastructures, applications, and environments. The insights we gain from them, in places like our [THWACK®](#) community, allow us to address customers' needs now and in the future. Our focus on the user and our commitment to excellence in end-to-end hybrid IT management have established SolarWinds as a worldwide leader in solutions for observability, IT service management, application performance, and database management.
