# WE ARE WEAVEWORKS

## The GitOps leaders

## Our company

**Weaveworks** is a global software and services company with offices in San Francisco, New York, London and Berlin.

In 2014, we set out to create a developer-centric operating model for cloud native applications. We wanted to make it quicker and easier for developers to update their apps, all without compromising security, stability or availability. **In 2017, we named this model GitOps**.

A founding member of the Cloud Native Computing Foundation and originator of successful OSS projects such as Flux, we are committed to GitOps, a developer centric operating model for cloud native applications and infrastructure. As the model gains adoption worldwide, we will remain at the forefront of its development — and its implementation in the enterprise, all over the world.

## Our products

### Weave GitOps Core

For many, this will be the ideal opportunity to experience continuous delivery with GitOps. Fully open source and at no cost, **Weave GitOps Core** includes everything you need to get started. Just type two commands and you're off.

**GET STARTED TODAY**

### Weave GitOps Enterprise

Our **Weave GitOps Enterprise** subscription enables continuous operations, making it easy to deploy and manage Kubernetes clusters and applications across any environment. While the base components are the same as Weave GitOps Core, the enterprise offering adds:

- Tiered commercial support
- A single management console that lets you operate clusters in the cloud, on the edge or in any hybrid scenario.
- A standardized install across Kubernetes platform providers – it can even be used to bring existing Kubernetes clusters under GitOps control.

**SCHEDULE A DEMO**

**Professional Services & Site Reliability Engineering**

For customers that want **personalized care, advice and coaching**, we can provide you with a named expert at your side to develop DevOps practices and handle support issues. Our SREs bring the latest DevOps skills, knowledge and experience to bear, working alongside your team and providing knowledge transfer. Included are recommendations on design, deployment and more general operations problems.
