

Pediatric Infectious Diseases Testimonials

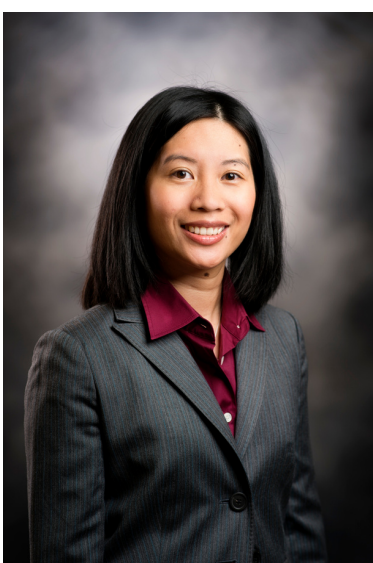

“Having a pediatric infectious diseases fellow has made our overall service much more robust. Having trainees at this advanced level has stimulated interesting discussions about our medical decisions and fellowship input has proven to bring valuable insights into our discussions. As we train our next generation of pediatric infectious disease specialists, I feel we can provide valuable historical context and experiences while the fellows explore the cutting edge of our field.”

George Fogg, Pediatric Infectious Diseases attending, fellowship Program Director

“There is nothing more important than training the next generation of pediatric infectious diseases physicians. We deeply value the academic interchange with our fellows, as well as all the other learners we host in our rotations. It’s deeply satisfying to watch our trainees grow and develop into independent providers with passion and expertise in our amazing field. We also embrace the opportunity to include fellows in our scholarly work and support their own investigator-initiation research.”

Rosemary Olivero, Pediatric Infectious Diseases attending and Section Chief of Pediatric Infectious Diseases

“We love having learners of every level. Having a fellowship and more advanced learners allows us to delve more deeply into questions and controversies regarding infections. We’re no longer talking about the basics, but now debating the merits of various tests and treatment strategies, which is incredibly engaging and beneficial to patients as we are more likely to stay up-to-date. In addition, our close relationship with our adult ID fellows gives us a window into treatment in that age group and insights into what may be coming down the pipeline for pediatrics, and vice versa.”

Daliya Khuon, Pediatric Infectious Diseases attending

“As a current Pediatric Infectious Disease fellow, I couldn't be happier about my choice of training program. Our attendings are truly invested in the growth of trainees, not only as clinicians but also as individuals. The department is extremely collegial and collaborative, which fosters an extremely positive work environment. Many programs will talk about fostering a sense of comradery but here it is truly woven into the very fabric of things. From an academic standpoint, exposure to a wide range of patients and pathologies serves to foster excellent discussion and teaching both at the bedside and in formal didactic settings. As a former resident at HDVCH the ability to pass on knowledge to new residents and medical students has been an immensely rewarding experience and has also helped me to cement my own knowledge base.”

James Polega, Pediatric Infectious Diseases fellow
