

Your CTEM readiness *checklist*:

8 signs you needed it yesterday

Continuous threat exposure management (CTEM) is transforming how organisations manage risk. Security leaders are rolling it out to make their programmes stronger and take pressure off their team. So how do you know if it's time you brought CTEM on board?

If any of this sounds like your day-to-day, it's time to take action.

1. Your *asset inventory* is a spreadsheet that's always out of date

You have constantly updated your inventory based on the latest call, export or system refresh, never certain of the fidelity or freshness of any list.

2. You're drowning in *alerts* with no clear place to start

You get massive scan reports without critical context or prioritisation, and struggle to know what to do first.

3. Prioritisation means *fixing* whatever issue yells loudest

You have a reactive approach to fixes, driven by the latest news headline or whoever complains most.

4. Your *tools* don't talk to each other

You have lots of security tools, but they operate in isolation, create data silos and make it impossible to see the big picture.

5. Shadow IT feels like a constant *suspicion* you can't confirm

You have a hunch people are using unauthorised apps and services, but no authoritative way of finding out.

6. Cloud security feels like the *Wild West*

You're not confident your cloud services are configured securely or even that you know about all of them.

7. *Remediation* takes forever, if it happens at all

Security may report a problem, but issues languish for weeks or months without getting fixed.

8. You're stuck in *firefighting* mode instead of prevention

You spend all your time reacting to incidents instead of proactively preventing them.

Start CTEM on a sound foundation

We've partnered with Axonius to help you build CTEM on a foundation of complete asset intelligence. By unifying data across devices, users, cloud and apps, you'll gain the visibility needed to identify risks and respond decisively.

Ready to put CTEM into action?

We're here to help you get started quickly and confidently. To see how we can help you centralise your asset intelligence with Axonius, reach out to us.
