

SANS 2022 Mitigating Supply Chain Attacks Report

Author: **Matt Bromiley**

Presentation Date: **October 19th, 2022**

Analyst Program 

OVERVIEW

Modern enterprises are relying more and more on third-parties to assist in business operations, facilitate employee and customer needs, and augment various internal and external capabilities. Trusting a part of your environment or security posture to a third-party vendor is not a bad idea - however, what happens when an adversary takes advantage of that trusted relationship to gain access into your environment? We have seen far too many recent examples to wonder if, but instead must consider “when” this might happen.

MEET THE AUTHOR

Matt Bromiley

SANS Certified Instructor

Matt Bromiley is a principal incident response consultant at a top digital forensics and incident response (DFIR) firm, where he assists clients with incident response, digital forensics, and litigation support. He also serves as a GIAC Advisory Board member, a subject-matter expert for SANS Security Awareness, and a technical writer for the SANS Analyst Program. Matt brings his passion for digital forensics to the classroom as a SANS Instructor for FOR508: Advanced Incident Response, Threat Hunting and Digital Forensics, and FOR572: Advanced Network Forensics, where he focuses on providing students with implementable tools and concepts.

Security teams often may have a hard time securing their own networks, let alone keeping watch on all the integrations within their environment. In this whitepaper, we address exactly that. We will reflect on the supply chain risks posed to thousands of organizations over the past 24 months. We will look at steps organizations can take to protect themselves while maintaining that trusted, third-party relationship. Finally, we will also look at how the procurement, testing, and implementation stages are critical for effective supply chain security.

SPONSOR

- Sponsors of this highly sought out report can position themselves as a trusted solution provider for detecting and combatting today's threats.
- Co-brand the whitepaper and webcast.
- Collaborate with SANS' best cybersecurity experts who are at the forefront of the ever-changing war on cybersecurity.
