- Given the nature of SANS classes, we recommend you do not use your regular production laptop for your class. In many courses, you will be installing new software and tools which can sometimes present risks to your system. In addition, in many hands-on labs, you may be connecting to a shared network with other attendees to attack specified targets. Although we state that students must NOT target other students' systems, and risk being ejected from the class if they do, SANS cannot be held responsible for your system if damage occurs due to unauthorised access during a workshop or lab exercise.
