

INSIDER THREAT, PHISHING, & MALWARE SOLUTIONS FORUM

Virtual Event | June 17, 2022

OVERVIEW

Phishing has been a leading entry vector for threat actors for more than a decade - and that's not showing any signs of slowing down. Phishing will continue to be a threat as it is used most often by threat actors to deploy malware, which somehow is still evading many of our defenses (seriously, how are we still talking about this?!). The last several years have shown insider threats are compounding the attack surface organizations must monitor for.

This forum provides sponsors the ability to present a solution to a problem in the insider threat, phishing, or malware space. Attendees will leave armed with knowledge about how to better tackle these threats in their environments. Sponsors have the unique opportunity to develop a compelling agenda and showcase their products and solutions to high level security practitioners and cybersecurity professionals. Speak directly to those who are on the front lines every day protecting their organization against the latest threats and showcase your tool's capabilities.

CHAIRPERSON

[Jake Williams](#)
SANS Senior Instructor

When a complex cyber attack put a private equity investment of more than \$700 million on hold, the stakes couldn't have been higher. But that's exactly the kind of challenge that motivates Jake Williams, a computer science and information security expert and U.S. Army veteran. To help mitigate the attack, Jake plied his information security expertise, discovered that not one but three different attackers had compromised the firm's network, and went about countering their moves.
