

KUBERNETES AND CONTAINER SECURITY SOLUTIONS FORUM

Virtual Event | August 26, 2022

OVERVIEW

Containers have become the primary approach to distributing and deploying software for many organizations. Unfortunately, containerized applications can quickly become hard to manage on a large scale and Kubernetes are helping with this adoption and have become vital for leveraging containers. There are many benefits of automating tasks for deploying, scaling, updating and managing containerized applications. However, it is essential to realize that these tools can also create vulnerabilities without appropriate security measures in place.

The Kubernetes and Container Security Solutions Forum brings solution providers and security vendors together to present best practices around kubernetes, containerized workloads, automation, and more. Sponsors have the unique opportunity to develop a compelling agenda and showcase their products and solutions to high level security practitioners and cybersecurity professionals. Speak directly to those who are on the front lines every day protecting their organization against the latest threats and showcase your tool's capabilities.

CHAIRPERSON

Magno Logan
Information Security Specialist

Magno Logan works as an Information Security Specialist for Trend Micro. He specializes in Cloud, Container and Application Security Research, Threat Modeling and Red Teaming.
