

8x8 Trial

Make testing voice, video and chat a breeze.

Path to success

With an 8x8 Trial, you can:

- Create user profiles
- Assign extensions
- Activate phones
- Set up auto attendants
- Create ring groups
- Use mobile & desktop apps
- Test inbound & outbound calls
- Try out 8x8 Team Messaging
- Experience 8x8 Video Meetings
- Access analytics

Test what you need

- Voice, video & chat software
- IP phones
- Network performance

Pick your trial

8x8 offers two types of trials so you can test our world-class cloud communications solution in your environment.

Trial option 1: Software only

An 8x8 Specialist will schedule and provide a walkthrough of the 8x8 mobile and desktop apps. They will assist with downloading, setting up and using voice, video conferencing and chat capabilities.

Trial option 2: Software & hardware

An 8x8 Specialist will coordinate shipping the trial to your designated facility. Step-by-step instructions and everything your team needs to test voice, video and chat are included in the trial's reusable shipping container. The 8x8 software & hardware trial comes with multiple IP phones and SD-WAN to test and optimize the performance of your network. At the conclusion of the trial, just ship back the hardware in the container.

Time to test everything

Both trials last up to 10 business days. You will have a dedicated 8x8 Specialist to assist during the trial period. We will follow up after your trial to ensure that the requested features and functionality were successfully tested. How-to videos are also provided to ensure you get the most from your trial experience.

Optimize your network for cloud service

Collaboration and communication are the lifelines of any business. To connect both your distributed workforce and customer base, the quality and availability of communications solutions are more important than ever.

Your cloud service provider plays a key role in localization and routing of applications so that end-users experience minimum latencies and great performance. However, the quality of service is only as good as your underlying network. Network inefficiencies can cause the audio to break-up and video to become jittery and unusable. Optimizing network performance to deliver exceptional user experiences is critical.

8x8 Managed Technical Services (MTS) combines SD-WAN and 8x8 Premium customer support to deliver assured performance for mission-critical applications over cost-efficient internet links. MTS is delivered as an add-on service to 8x8's core communications and collaboration offerings.

All networks are not created equal and network inefficiencies can cause real-time traffic like voice and video to be choppy and unintelligible. With 8x8 Managed Technical Services, businesses get an optimized network – as well as insights into issues on their network – to transport their cloud-delivered 8x8 voice, video, chat and contact center services.

– Dejan Deklich, Chief Product Officer at 8x8

Your hardware trial includes MTS

The 8x8 software & hardware trial includes MTS to test, prioritize and optimize your network for voice, video and chat. MTS doesn't require special skillsets for deployment. Everything you need is included in the shipping container. Clear labels and instructions will guide setup in just a matter of minutes.

MTS solves typical network traffic jams by automatically prioritizing traffic flows to ensure optimum performance for voice and video communications. During your 8x8 trial, you will be able to test, prioritize and optimize your network for faster, clearer communications.

8x8, Inc. (NYSE: EGHT) is transforming the future of business communications as a leading Software-as-a-Service provider of voice, video, chat, contact center and enterprise-class API solutions powered by one global cloud communications platform. 8x8 empowers workforces worldwide to connect individuals and teams so they can collaborate faster and work smarter.
