

## ACUVUE® VITA® Packaging Update (Sphere and Astigmatism)

Starting in the late summer of 2026, you may notice an update to the packaging of ACUVUE® VITA® contact lenses (both sphere and astigmatism).

### What is changing:

- Updated logo and color on both the product packaging and foil.
- Front-flap carton opening (replaces the previous tear-open package).
- Foils are now cut in a straight line with no curved corners.

### What is not changing:

- The comfort, visual performance, and fit of the contact lenses remains unchanged
- Manufacturing location and process of the contact lenses remains unchanged

During this transition, you may receive product in either the current or updated packaging. This is expected as existing inventory of the current packaging is depleted. Please find below images representing the packaging updates.

If you would like more information about the new packaging, please contact Johnson & Johnson Customer Service at [vpweb@visus.jnj.com](mailto:vpweb@visus.jnj.com) or speak with your eye care professional.

# Johnson&Johnson

**Important Information for Contact Lens Wearers:** ACUVUE® VITA® Contact Lenses are only available by prescription for vision correction as a daily wear lens with one-month recommended replacement. An eye care professional will determine whether contact lenses are right for you. Although rare, serious eye problems can develop while wearing contact lenses. To help avoid these problems, follow the wear and replacement schedule and the lens care instructions provided by your eye doctor. Do not wear contact lenses if you have an eye infection, or experience eye discomfort, excessive tearing, vision changes, redness or other eye problems. If one of these conditions occurs, remove the lens and contact your eye doctor immediately. For more information on proper wear, care and safety, talk to your eye care professional, call 1-800-843-2020, or download the [Patient Instruction Guides](#).

## **UV Disclaimer**

Helps protect against transmission of harmful UV radiation to the cornea & into the eye.

**WARNING:** UV-absorbing contact lenses are NOT substitutes for protective UV-absorbing eyewear such as UV-absorbing goggles or sunglasses because they do not completely cover the eye and surrounding area. You should continue to use UV-absorbing eyewear as directed. **NOTE:** Long-term exposure to UV radiation is one of the risk factors associated with cataracts. Exposure is based on a number of factors such as environmental conditions (altitude, geography, cloud cover) and personal factors (extent and nature of outdoor activities). UV-blocking contact lenses help provide protection against harmful UV radiation. However, clinical studies have not been done to demonstrate that wearing UV-blocking contact lenses reduces the risk of developing cataracts or other eye disorders. Consult your eye care practitioner for more information.
