## Primary Packaging configuration changes ACUVUE® OASYS 1-Day for Astigmatism

Starting October 2025, you and your patients may notice minor changes to the primary packaging (blister and lidstock) for some ACUVUE® OASYS 1-Day for Astigmatism lenses.

Product carton and graphics remain the same and there will be no changes made to the packaging materials, packing solution, or contact lenses. Our manufacturing facilities have not changed and remain located in Jacksonville, Florida and Limerick, Ireland.

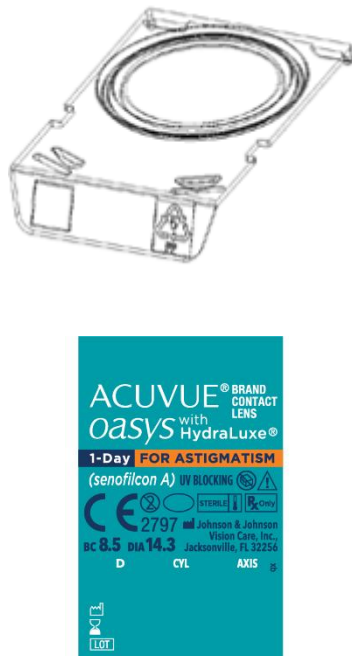

As we introduce this new configuration on ACUVUE® OASYS 1-Day for Astigmatism lenses, it is likely you and your patients will see both versions of the blister and lidstock in the market.

If you would like to obtain more information on the new packaging updates, please contact Johnson & Johnson Customer Service at 1-800-874-5278.

Please find below images representing the packaging updates.

### New Packaging Structure. Same Great Lenses!

Please find below images representing the packaging updates.

Version 1 (existing)	Version 2 (new)	Notes
		<ol style="list-style-type: none"><li>1) The changes are only for Astigmatism variants.</li><li>2) There are no changes to the outer carton.</li><li>3) The lidstock font color changes on "D, CYL, AXIS." All other graphics remain the same.</li><li>4) There will be 2 shapes for the Blisters (Version 1 and 2 described in this table).</li></ol>

**Important information for contact lens wearers:** ACUVUE Contact Lenses are available by prescription only for vision correction. An eye care professional will determine whether contact lenses are right for you. Although rare, serious eye problems can develop while wearing contact lenses. To help avoid these problems, follow the wear and replacement schedule and the lens care instructions provided by your eye doctor. Do not wear contact lenses if you have an eye infection, or experience eye discomfort, excessive tearing, vision changes, redness or other eye problems. If one of these conditions occurs, remove the lens and contact your eye doctor immediately. For more information on proper wear, care and safety, talk to your eye care professional, call 1-800-843-2020, or download the [Patient Instruction Guides](#).

Helps protect against transmission of harmful UV radiation to the cornea & into the eye.

**WARNING:** UV-absorbing contact lenses are NOT substitutes for protective UV-absorbing eyewear such as UV-absorbing goggles or sunglasses because they do not completely cover the eye and surrounding area. You should continue to use UV-absorbing eyewear as directed. **NOTE:** Long-term exposure to UV radiation is one of the risk factors associated with cataracts. Exposure is based on a number of factors such as environmental conditions (altitude, geography, cloud cover) and personal factors (extent and nature of outdoor activities). UV-blocking contact lenses help provide protection against harmful UV radiation. However, clinical studies have not been done to demonstrate that wearing UV-blocking contact lenses reduces the risk of developing cataracts or other eye disorders. Consult your eye care practitioner for more information.
