

# About UnifyApps

## **The agentic automation platform for the enterprise.**

UnifyApps is the Horizontal AI Operating System — the Fourth Platform. It does the 80% of Enterprise AI that has nothing to do with the model: unifying knowledge, governance, and actionability across every system into one Enterprise Brain (an enterprise context graph), then letting teams assemble reusable workflows, agents, and apps — human + AI — on top. Open and model-agnostic, additive to the existing stack with 950+ connectors, UnifyApps takes enterprises from pilot to production up to 10x faster, 10x cheaper, and 10x easier to maintain — without rip and-replace or lock-in to any model, vendor, or roadmap.

Founded in 2023 and backed by WestBridge Capital, ICONIQ, and Elevation Capital, UnifyApps is headquartered in New York with a presence across the Americas, EMEA, and India.

# Horizontal AI Operating System Architecture

Provides the data, action, and governance context that AI needs to scale workflows, apps, and agents so you can build production-grade AI solutions faster, cheaper and easier to maintain, **RADICALLY**.

THIS IS HOW YOU DO THE 80% RIGHT

Plug your systems into the OS, build *assembly-first*, grow the *brain* with each use case — and *govern everything*.

The whole platform on one page: systems in → contexts synthesized into the enterprise brain → builders on top → governance around all of it.
