

LED lights with glass baubles decorated with artificial snow

Make decorative LED lights with small glass Christmas baubles filled with artificial snow.

Inspiration: 15773

1

Pour glass glue into the glass bauble and turn it around to distribute the glue. Pour the excess glue back into the bottle.

2

Make a small paper funnel and use this for pouring the artificial snow into the glass bauble. Turn the bauble around to distribute the snow. Pour the excess snow back into the bottle.

3

Attach a glass bauble onto every other bulb on the LED lights. Attach a bulb inside the metal hanger making sure that the metal legs are on either side of the bulb. Insert into the glass bauble.
