

## Homemade candles from natural beeswax

Make your own candles by rolling or punching out candles from beeswax sheets with a shape cutter and adding a wick.

Inspiration: **15811**

**1**

Cut a wick for the beeswax candle slightly longer than the short end of the beeswax sheet.

**2**

Fold the edge of the beeswax sheet around the wick so that it just covers it. A tip: make sure that the beeswax is at room temperature making it easier to work.

**3**

Roll the beeswax sheet until you have reached the end and continue with another beeswax sheet for a thicker candle.

**4**

Punch out six stars for the star-shaped candle using your chosen shape cutter. Tap lightly with a hammer if the wax is too hard.

**5**

Make a hole in the centre of all the stars using a wooden flower stick or similar. The wick needs to fit through the hole.

**6**

Thread all the stars onto a wick as shown in the photo. Important: Place the finished candle on a non-flammable surface.
