

 Recommendation	Strength of recommendation	Certainty of evidence
<p>In people with suspected ACS, evaluation with high-sensitivity cardiac troponin (hs-cTn) assays is recommended.</p>	<p>Strong</p>	<p>High</p>
<p>Elevated hs-cTn values should be defined using sex-specific >99th percentiles.</p>	<p>Consensus</p>	
<p>Apply the assay-specific troponin values relevant to the cTn assay being used.</p>	<p>Consensus</p>	
<p>When evaluating changes (deltas) in troponin values, serial results from a single assay must be used.</p>	<p>Consensus</p>
