

A21. Develop your logic model

Module 6.3 - Monitoring and evaluation

Develop a logic model for your own AAIC-funded project. This will help you clearly describe what resources you need, what activities you will do, what you expect to produce, the change you want to see, and the long-term impact your project aims to achieve.

Use the template to fill in each section based on your specific project. You can refer to the example from the community fitness program lesson for ideas. Remember, your logic model should reflect your real project and be practical for your team to use.

Inputs (What we need)	Activities (What we do)	Outputs (What we get)	Outcomes (What we change)	Impact (What we achieve)
