

Is a vegetarian diet adequate? Concepts and Controversies in Plant-based Nutrition

Meeting the Nutrient Reference Values on a Vegetarian Diet: *Sample Vegetarian Meal Plans and Analyses*

An Australian first, scientific literature review of vegetarian diets was recently conducted by a group of Accredited Practising Dietitians (APDs) and university academics with expertise in the area of vegetarian nutrition. As a result, a 40-page peer-reviewed Supplement to the Medical Journal of Australia was published in June 2012.

From a practical perspective, the 'Meeting the Nutrient Reference Values on a Vegetarian Diet' paper looks at meeting nutritional requirements in a suite of meal plans which cover both sexes and different life stages. Sample single-day lacto-ovo vegetarian meal plans were developed to meet the Nutrient Reference Values, including increased requirements for iron and zinc at 180% RDI and 150% RDI respectively for vegetarians

This document contains the full analyses of the meal plans. For a discussion on these results, please refer to the full NRV paper available on the [MJA OPEN website](#).

Abbreviations and Footnotes Associated with Meal Plans and Analyses

ALA = α -linolenic acid.

CHO = carbohydrate.

LC n-3 PUFA = long-chain omega-3 polyunsaturated fatty acids.

MUFA = monounsaturated fatty acids.

NRV = Nutrient Reference Value.

PAL = Physical activity level.

PUFA = polyunsaturated fatty acids.

RDI = recommended dietary intake.

SFA = saturated fatty acids.

UL = upper level of intake.

y = years.

* NRVs for Australia and New Zealand (RDI and adequate intake).

† Energy value range is applicable to both male and female for the youngest in this NRV age group (males being the higher and females being the lower value). If additional energy is required in an individual diet for an older child, add discretionary kJ from foods including avocado, dried fruit, fresh juice, peanut butter and olive oil spread. Nutritional requirements are still met.

^ Energy value range is applicable to both male and female in this NRV age group (males being the higher and females being the lower value). If additional energy is required in an individual diet, add discretionary kJ. Nutritional requirements are still met.

Energy value is applicable to the youngest in this age group. If additional energy is required in an individual diet, add discretionary kJ. Nutritional requirements are still met.

‡ The energy in this meal plan meets the requirements for a lower PAL of 1.6 (light activity), associated with an estimated energy requirement of 8900–9200 kJ. If additional energy is required in an individual diet, add discretionary kJ. Nutritional requirements are still met.

§ Energy range is provided to be applicable to the large age range in this NRV group. If additional energy is required, add discretionary kJ. Nutritional requirements are still met.

¶ Acceptable macronutrient distribution range.

** This sample meal plan did not meet the extended RDI for iron (providing 180% of RDI for iron during pregnancy results in a level that is above the UL).

Ref: NHMRC, *Nutrient Reference Values for Australia and New Zealand--Including Recommended Dietary Intakes* (2006). 2006, Australian Government: Canberra.

Nutrient Analysis software: FoodWorks Professional, version 5 2007 (Xyris Software, Australia), utilising AusNut 1999 food composition database.

NRV age group: Children 1-3

1 year-old (15 month old). PAL 1.6 (light activity)

Reference weight 10.3kg (girls), 11.1kg (boys)

Breakfast:

2 fortified whole-wheat biscuits with ½ cup fortified soy milk, a sprinkle of chia seeds (<5g) and ¼ cup canned peaches (in natural juice, drained).

Snack:

Banana smoothie (made with ½ banana and ½ cup fortified soy milk).

Lunch:

Wholemeal sandwich with ½ cup baked beans.

Snack:

1 slice wholemeal bread (no crust) with tahini.

Dinner:

Tofu & vegetable casserole with ½ cup cooked brown rice (made with 60g tofu).

Add water as desired.
