Executive Summary

The mission of the NCAA/USOC Task Force (the “Task Force”) is to develop recommendations for implementation by the National Collegiate Athletic Association (the “NCAA”) and the United States Olympic Committee (the “USOC”) designed to protect and expand the opportunities for American student-athletes and coaches to realize the benefits associated with participation in collegiate athletic programs and sports traditionally included in the program for the Olympic Games.

It is a mission grounded in the view that in well-administered programs, participation in collegiate athletics represents a uniquely valuable educational experience for student-athletes and enriches the quality of campus life generally. As such, there is value in maximizing the opportunity for young people to participate in and benefit from that experience. And there is further value in focusing on those sports that have traditionally been included in the program of the Olympic Games because many of those sports have contributed significantly to the history and success of collegiate sports in America, and the continued existence of some of these sports in collegiate athletic programs is at issue.

In considering ways to protect and expand the opportunity for American student-athletes and coaches to realize the benefits associated with participation in collegiate athletic programs that offer sports traditionally included in the program for the Olympic Games, the Task Force developed the following eight (8) recommendations:

Increasing the Resources Available to Support the At-Risk and Emerging Sports

Recommendation 1

The NCAA and USOC should jointly make an ongoing investment in (while also seeking the investment of others) a new independent charitable foundation for the purpose of fostering the

sponsorship* of Olympic sports by America's colleges and universities. That foundation should be in place and operational early in 2006.

Building Awareness and Commitment

Recommendation 2

Establish a program to encourage the widespread adoption of the following value statement for maintaining broad-based intercollegiate athletic programs in the United States:

[Insert name of organization or institution] believes that participation in intercollegiate athletics represents a uniquely valuable educational experience for student-athletes and enriches the quality of campus life generally. As such, there is great benefit, consistent with the academic mission of American colleges and universities, in ensuring that diverse athletic opportunities are available to students, especially in those sports that connect to the Olympic ideals, inspire young people and attribute to a lifelong commitment to fitness. We are committed to doing all we reasonably can to help ensure that those diverse athletic opportunities continue to exist as part of intercollegiate athletics in America.

Recommendation 3

a) Establish an electronic syndication system to identify and distribute to media outlets (including, in particular, campus newspapers and local papers in college towns) news and features related to the at-risk and emerging sports and the student-athletes and coaches who participate in them.

* While the words "sponsor" or "sponsorship," when used in the context of athletics, often imply a commercial relationship, in this Report the terms are used (as they traditionally are by the NCAA) to refer to a school's inclusion of a sport as part of its athletic program.

b) Create a continuing education program to help coaches become more effective advocates for their programs within the university community. This program, although developed centrally for use across all sports, should be administered through the national governing bodies and/or sport-specific coaches' associations.

c) From among the excellent materials that have already been created by sports like wrestling, swimming and tennis, identify and share best practices for responding to a threatened elimination of a program. This process should result in the production of a standard set of materials that can be easily modified to fit the needs of the individual sports.

Altering the Value Proposition Represented by These Sports

Recommendation 4

Promote models for more effectively utilizing existing at-risk and emerging sport programs to support:

- Sport-specific community outreach,
- The training of elite athletes in Olympic sports,
- Hosting of events (creating a presumption in favor of awarding event to university facilities whenever possible). Those events need not be limited to those involving college athletes. Any event that effectively promotes the sport and/or brings additional revenue to the school is a candidate to be hosted by the college or university.

Identifying Preferred Strategies for Controlling Costs

Recommendation 5

Conduct a survey of the NCAA membership to identify the preferred strategies to be implemented to control the costs associated with operating the at-risk and emerging sports. The survey should be completed and the resulting data available for review by April, 2006.

Increasing the Marketability of the At-Risk Sports

Recommendation 6

a) Consider modification of the NCAA amateurism, participation, and competition rules to increase the likelihood that some of the most accomplished athletes in the at-risk and emerging sports will continue to participate in collegiate athletics.

b) Explore ways to more effectively leverage the event management and marketing resources of the NCAA and national governing bodies ("NGBs") to develop new events and/or market existing events in order to more effectively highlight collegiate competition in at-risk and emerging sports while also bringing additional revenue to those programs.

Aligning the Rules to Support the Mission

Recommendation 7

Work closely with the NCAA's Olympic Liaison Committee to develop a package of legislative proposals designed to protect and expand the opportunities for student-athletes to participate in the at-risk and emerging sports. Among the potential areas of focus for these legislative changes are the following:

- Modification of the sport sponsorship rules to include some modest reward for sponsoring these sports.
- Lessening of restrictions on training time for athletes who have achieved a certain high standard of academic performance.
- Expanding the circumstances under which athletes not currently enrolled in a college or university may practice and/or use university facilities with student-athletes and college coaches.
- Further relaxation of amateurism rules to perhaps:
 - limit consequences of money earned in Olympic sports prior to entering college
 - giving greater deference to funds paid by or through the NGB,
- Facilitate the underwriting of athletic scholarships by third parties including but not limited to the USOC or the NGBs.

Setting Goals to Measure Progress

Recommendation 8

Set numerical goals for maintaining and adding programs in the at-risk sports, issue an annual report of the industry's progress in furtherance of the goals, and offer special recognition of those schools and NGBs who have most effectively contributed to the solution (and those who have not).

The Joint Task Force

On May 11, 2004, the NCAA and the USOC announced the formation of a joint task force ("the Task Force") to examine the decline in sponsorship of Olympic sports by America's colleges and universities.

The NCAA and the USOC each appointed members to the Task Force. The USOC appointed:

- Richard Bender, Executive Director, USA Wrestling
- Herman Frazier, Director of Athletics, University of Hawaii
- Ron Galimore, Senior Director of Men's Programs, USA Gymnastics
- Courtney Johnson, USOC Athletes Advisory Council Member
- William Martin, Director of Athletics, University of Michigan
- Andrew Valmon, Head Track and Field Coach, University of Maryland; USOC Athletes Advisory Council Member
- Jon Vegosen, Chairman of the US Tennis Association Collegiate Committee
- Chuck Wielgus, Executive Director, USA Swimming

The NCAA appointed:

- Andy Geiger, former Director of Athletics, The Ohio State University
- Ian Gray, Vice-Chair, Student-Athlete Advisory Committee
- Larry James, Dean of Athletics and Recreational Programs and Services, Richard Stockton College of New Jersey
- Kyle Kallander, Commissioner, Big South Conference; Chair Olympic Sports Liaison Committee
- Cheryl Levick, Director of Athletics, Saint Louis University
- Peter Likins, President, University of Arizona

- Jean Lenti Ponsetto, Director of Athletics, DePaul University

Senior staff of both organizations also participated fully in the Task Force. Those individuals included:

- Jeff Howard, Director, Corporate Communications, USOC
- Tom Jernstedt, Executive Vice President, NCAA
- Kevin Lennon, Vice President for Membership Services, NCAA
- Jim Scherr, Chief Executive and Chief of Sport Performance, USOC
- Jennifer Strawley, Director of Membership Services/Student-Athlete Reinstatement, NCAA
- Judy Sweet, Vice President for Championships, NCAA
- Don Whittle, former Manager, Collegiate and International Programs, USOC

The Task Force was chaired by Jack Swarbrick, an attorney with extensive experience working in both collegiate and Olympic sports. In addition, the Task Force benefited from statistical analysis provided by both the NCAA and the USOC, and administrative support of Mr. Swarbrick's assistant, Rosanne Hunter.

Methodology

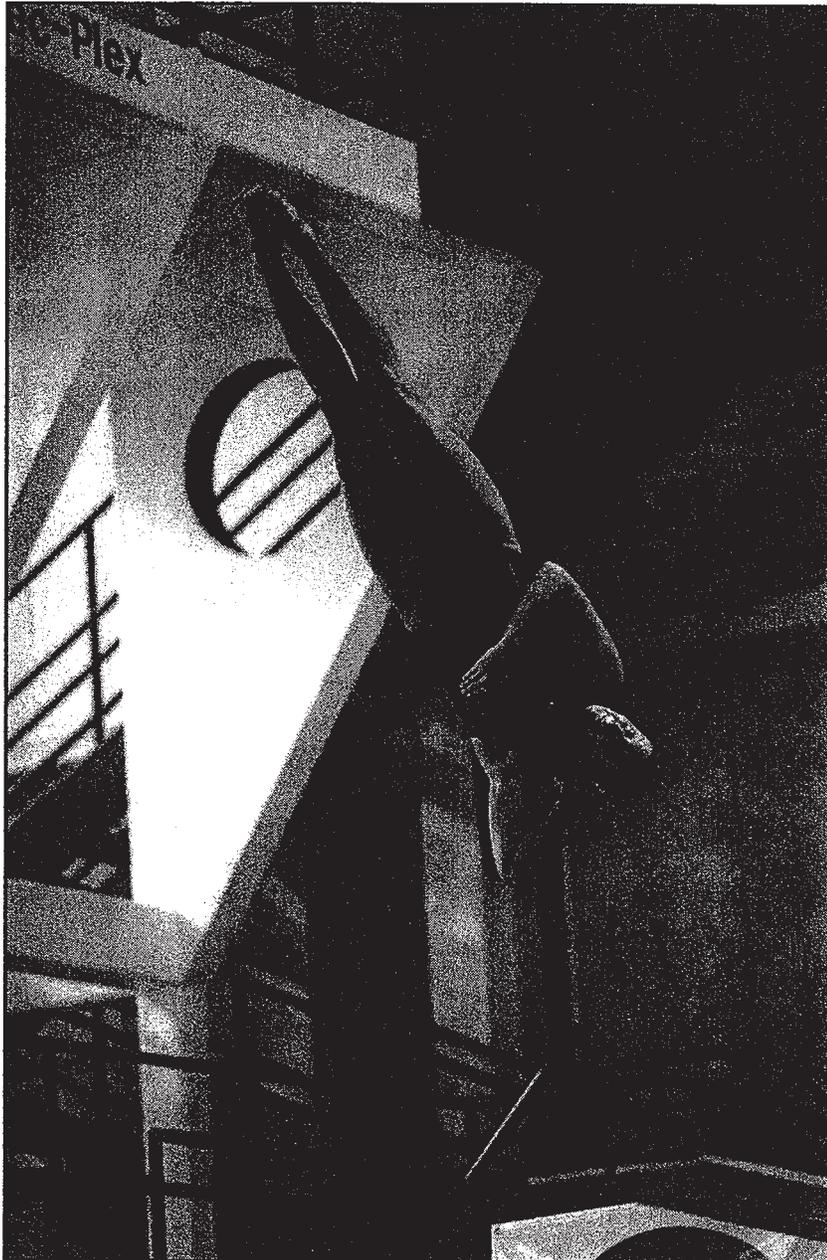

1. The Task Force completed its work over the course of 12 months, holding meetings on the following schedule:

July 21, 2004	Chicago
September 22, 2004	Indianapolis
January 5, 2005	Dallas (in association with the NCAA Convention)
April 7, 2005	Colorado Springs
June 17, 2005	Orlando (in association with the NACDA meeting)

2. The Task Force used the following principles to guide its operations:

- a) The Task Force was provided with and based its analysis upon a common base of statistical information assembled by the Chair with the assistance of the NCAA and the USOC.
- b) As reflected in the make-up of the Task Force, the location of its meetings, and the processes it created to communicate with interested parties, the Task Force solicited input broadly.
- c) The Task Force adhered strictly to the charge given to it by the NCAA and USOC. It is worth noting in this regard that the focus of the Task Force did not include a consideration of the merits of Title IX. While the impacts of Title IX were viewed as being relevant to the Task Force's deliberations, consideration of the merits or scope of the law as enforced and proposals for the modification of the law or its enforcement were not.
- d) The Task Force remained focused throughout its process on producing specific and substantive recommendations as part of a final Report to be issued by September 30, 2005. In developing those recommendations, only proposals that enjoyed broad support among the members of the Task Force were given priority.

3. The Task Force divided its work into the following areas of focus:
- Defining the Task Force's mission and foundational concepts
 - Identifying and quantifying the problem
 - Developing recommendations
 - Building implementation strategies

Mission Statement

The mission of the NCAA/USOC Task Force is to develop recommendations for implementation by the NCAA and USOC designed to protect and expand the opportunities for American student-athletes and coaches to realize the benefits associated with participation in collegiate athletic programs in sports traditionally included in the program for the Olympic Games.

Several aspects of this Mission Statement merit additional discussion. The first is the importance the Task Force places on developing recommendations that are designed to do more than merely "stop the bleeding" associated with the elimination of Olympic sport opportunities for student-athletes. The Task Force's long-term goal is to contribute to the creation of an environment that also creates new opportunities through the creation of new programs or the re-establishment of programs that were previously eliminated.

Secondly, the Task Force clearly intends for the primary beneficiaries of its efforts to be American athletes and coaches. After all, the mission of one of the two sponsors of the Task Force, the USOC, is to achieve competitive success in the Olympic Games. Having said that, it is worth noting that the Task Force has not included in this Report any recommendations aimed at limiting the access of foreign athletes to American collegiate sports programs. In stressing the benefits of maintaining diversity in collegiate athletic programs, the Task Force believes that diversity should be encouraged in all its forms. To the extent that pursuit of diversity proves to be at odds with the best interests of the USOC and its national governing bodies, the Task Force believes it is up to those entities, using the tools available to them (e.g. funding mechanisms, selection of coaches to represent the United States, and awarding of events, etc.), to encourage change.

The mission statement of the Task Force also makes clear that the Task Force views the problem of the loss of programs in athletic departments in terms of its impact on both the student and the teacher, or, in the words of the mission statement, the student-athlete and the coach. The unique model that is American intercollegiate athletics not only provides an extraordinary opportunity for more than 360,000 athletes; it also offers a unique training ground for coaches. Collegiate athletic programs around the country and throughout the decades have developed the coaches who have helped to transform young lives through sport in colleges, high schools, local youth programs, and even foreign countries.

Finally, the mission statement refers to "sports traditionally included in the program of the Olympic Games." The Task Force recognizes that the program of sports included in the Olympic Games has been, and increasingly likely will be, subject to change. The focus of the efforts spawned by this Report ought to be mindful of changes to the Olympic program from quadrenium to quadrenium (especially as they relate to the addition of new sports and events). However, consistent with its view that there is value in maximizing the opportunity for young people to participate in and benefit from college athletics, the Task Force believes that a longer time horizon than a single Olympic quadrenium ought to be used when identifying "Olympic sports."

Foundational Concepts

The Task Force reflects a unique partnership between the two leaders of amateur athletics in America. And it reflects the view, shared by the USOC, the NCAA, and their members, that the subject matter of this Task Force is of great significance. That is the case because:

1. In well-administered programs, participation in collegiate athletics represents a uniquely valuable educational experience for student-athletes and enriches the quality of campus life generally. As such, there is value in maximizing the opportunity for young people to participate in, and benefit from, that experience.

2. In protecting and expanding the opportunities for students and educators to participate in intercollegiate athletics, there is further value in focusing on those sports that have traditionally been included in the program for the Olympic Games because: a) many of those sports have contributed significantly to the history and success of collegiate sports in America, and b) the continued existence of some of these sports in collegiate athletic programs is at issue.

3. The presence of collegiate programs in Olympic sports has been a critical factor in America's success in the Olympic Games and international championships. This is the case because those programs: a) effectively underwrite significant facility and program costs that would otherwise be borne by the Olympic sports industry, b) provide a critical arena for coaching development and athlete training and talent identification, and c) provide an indirect but important incentive to children (and their families) to participate in an Olympic sport.

4. There is value in this country's participation in the Olympic Games because that participation provides a unique experience for athletes and coaches, promotes goodwill among countries, and is a unifying force within the United States.

The Sports that are the Focus of the Task Force's Work

From among the sports which both have a championship sponsored by the NCAA and are traditionally included in the Olympic program of sports, there are two subsets of sports which are the focus of this Report. The first includes those sports that have experienced a measurable decline in sponsorship by colleges and universities during the past decade and are perceived as being at risk to experience further decline if some form of intervention does not occur. These are referred to in this Report as the "at-risk sports." The second are those sports that have been identified by the NCAA as "emerging sports" and are traditionally included in the Olympic program of sports.

Identifying the At-Risk Sports

The process of identifying the at-risk sports undertaken by the Task Force began by identifying the 39 sports for which the NCAA conducts a championship. From that list, the Task Force then eliminated the six sports that have not been part of the Olympic program:

Men's:

- Baseball
- Basketball
- Cross country
- Fencing
- ~~Football~~
- ~~Golf~~
- Gymnastics
- Ice Hockey
- ~~Laerosse~~
- Rifle
- Skiing
- Soccer
- Swimming and Diving
- Tennis
- Track & Field – Indoor
- Track & Field – Outdoor
- Volleyball
- Water Polo
- Wrestling

Women's:

- Basketball
- ~~Bowling~~
- Cross country
- Fencing
- Field Hockey
- ~~Golf~~
- Gymnastics
- Ice Hockey
- ~~Laerosse~~
- Rifle
- Rowing
- Skiing
- Soccer
- Softball
- Swimming and Diving
- Tennis
- Track & Field – Indoor
- Track & Field – Outdoor
- Volleyball
- Water Polo

With the remaining sports as the focus of its analysis, the Task Force then developed a methodology for identifying those sports that experienced a meaningful loss of participation opportunities for young people at America's colleges and universities. In conducting this analysis the Task Force elected to focus on the loss of sports sponsorship among D-I schools. This focus was adopted for two reasons. The first was the fact that a review of recent Olympic teams (see for example, Appendix B) confirmed that the vast majority of Olympic athletes and coaches who participated in collegiate sports did so at a D-I school. Secondly, by focusing on a single division

(and focusing on the percentage of sports sponsorship within that division) the Task Force avoided the complexity that would otherwise result from the movement of schools from one division to another during the time span of our analysis. In taking this approach, the Task Force wants to stress that it is not drawing any distinction between the quality or nature of a sports program offered at one classification of college or university versus another. The benefits to a student-athlete or educator-coach derived from participation in a well run sports program are equally valuable and important regardless of the nature of the school providing that experience.

Having established the sports and schools that would be the focus of its analysis, the Task Force then established a standard for measuring loss of opportunity. The test employed by the Task Force involved three steps.

Step 1. The Task Force required that the sport had experienced the elimination of at least ten (10) D-I programs during the 15-year period 1989 through and including 2004 (the "Period"). The Task Force recognizes that this reflects a very low threshold, but, as will become evident through the application of the other two steps in the process, this first step was designed largely as a method for quickly eliminating from consideration those sports that offered no evidence of a potential loss of opportunity. The application of this step eliminated an additional 12 sports from consideration as follows:

Men's:

- Baseball
- ~~Basketball~~

- Cross country
- Fencing

- Gymnastics
- ~~Ice Hockey~~
- Rifle

- Skiing
- Soccer

- Swimming and Diving
- Tennis
- Track & Field – Indoor
- Track & Field – Outdoor
- Volleyball
- Water Polo
- Wrestling

Women's:

- ~~Basketball~~

- ~~Cross country~~
- Fencing
- Field Hockey

- Gymnastics
- Ice Hockey
- Rifle
- Rowing
- ~~Skiing~~
- ~~Soccer~~
- ~~Softball~~
- Swimming and Diving
- ~~Tennis~~
- Track & Field – Indoor
- Track & Field – Outdoor
- ~~Volleyball~~
- ~~Water Polo~~

Step 2. From the list of remaining sports, the Task Force then applied the second part of the test by analyzing whether the **percentage** of D-I member institutions sponsoring the sport decreased during the Period as measured by the difference between the '03-'04 percentage of D-I institutions sponsoring the sport and the highest percentage sponsorship during the past 15 years. If it had, the third part of the test was applied.

Step 3. A determination was then made as to whether the sport had any one of the following characteristics:

- a) Recent experience suggesting that programs are continuing to be dropped?
- b) A number of current programs (relative to the number of programs in the sport during the Period) that supports the notion that the sport is at risk?
- c) A measurable decrease in squad size?

The analyses embodied in steps two and three of this process are reflected in the information included in this Report as Appendix A. It suggests that the Olympic sports identified below (in order of the total number of programs from fewest to greatest), should be considered at-risk as it relates to the further loss of sponsorship by American colleges and universities.

<u>Sport</u>	<u>Number of Programs</u>	<u>Decline in % Sponsorship</u>
Men's Gymnastics	17	8.1
Men's Water Polo	21	4.9
Men's Fencing	21	3.3
Men's Rifle	22	6.0
Men's Volleyball	23	1.1
Women's Rifle	29	1.6
Women's Gymnastics	64	3.6
Men's Wrestling	86	11.9
Men's Swimming/Diving	143	10.3
Men's Soccer	199	4.2
Men's Indoor Track	246	4.0
Men's Outdoor Track	264	3.7
Men's Tennis	269	10.9
Men's Cross Country	306	3.7

Note: Men's Rowing was eliminated from consideration at the outset because it is not included among the NCAA's 39 Championships. It is worth noting, however, that this Olympic sport also appears to be at risk as a collegiate sport with the percentage of members sponsoring the sport declining from 15% in 1996/97 to 7% in 2002-03. From 1989-90 through 2002-03, 71 D-I programs were dropped.

At first glance, it may strike some as odd that the Task Force has included among its list of at-risk sports some that continue to have very robust levels of sponsorship. Keep in mind, however, that the focus of the Task Force is the loss of opportunity, not the possible extinction of a sport. So, while men's gymnastics and water polo represent the most compelling examples of the at-risk sports because they have both very low levels of sponsorship and high rates of program terminations, men's tennis and swimming and diving – two sports with relatively high levels of sponsorship -- rank second and third (to wrestling) in the rate of program elimination over the past 15 years.

Emerging Sports

The NCAA has identified eight women's sports as "emerging sports." An emerging sport is one recognized by the NCAA that is intended to provide additional athletic opportunities to female student-athletes. NCAA member institutions are allowed to use emerging sports to help meet the NCAA minimum sports-sponsorship requirements and also to meet the NCAA minimum financial aid awards.

The current list of emerging sports (with the number of D-I schools sponsoring those sports listed in parentheses) includes:

Archery (3)	Equestrian (13)	Synchronized Swimming (4)
Badminton (1)	Rugby (1)	Team Handball (0)
Bowling (29)	Squash (8)	

Comparing this list to those sports traditionally included in the Olympic program eliminates bowling, rugby and squash from the scope of this Report. Among the remaining group of five emerging sports, none has yet reached the level of sponsorship to qualify as an NCAA Championship sport. In this sense these sports, although granted special status by the NCAA, might also be considered "at-risk" and so are included within the scope of the Task Force's efforts.

The combination of our analysis of the at-risk sports and the identification of the emerging sports results a final list of 19 sports that the Task Force believes should be the focus of its recommendations as follows:

Women's Sports

Archery	Rifle
Badminton	Synchronized Swimming
Equestrian	Team Handball
Gymnastics	

Men's Sports

Cross Country

Fencing

Gymnastics

Indoor Track

Outdoor Track

Rifle

Soccer

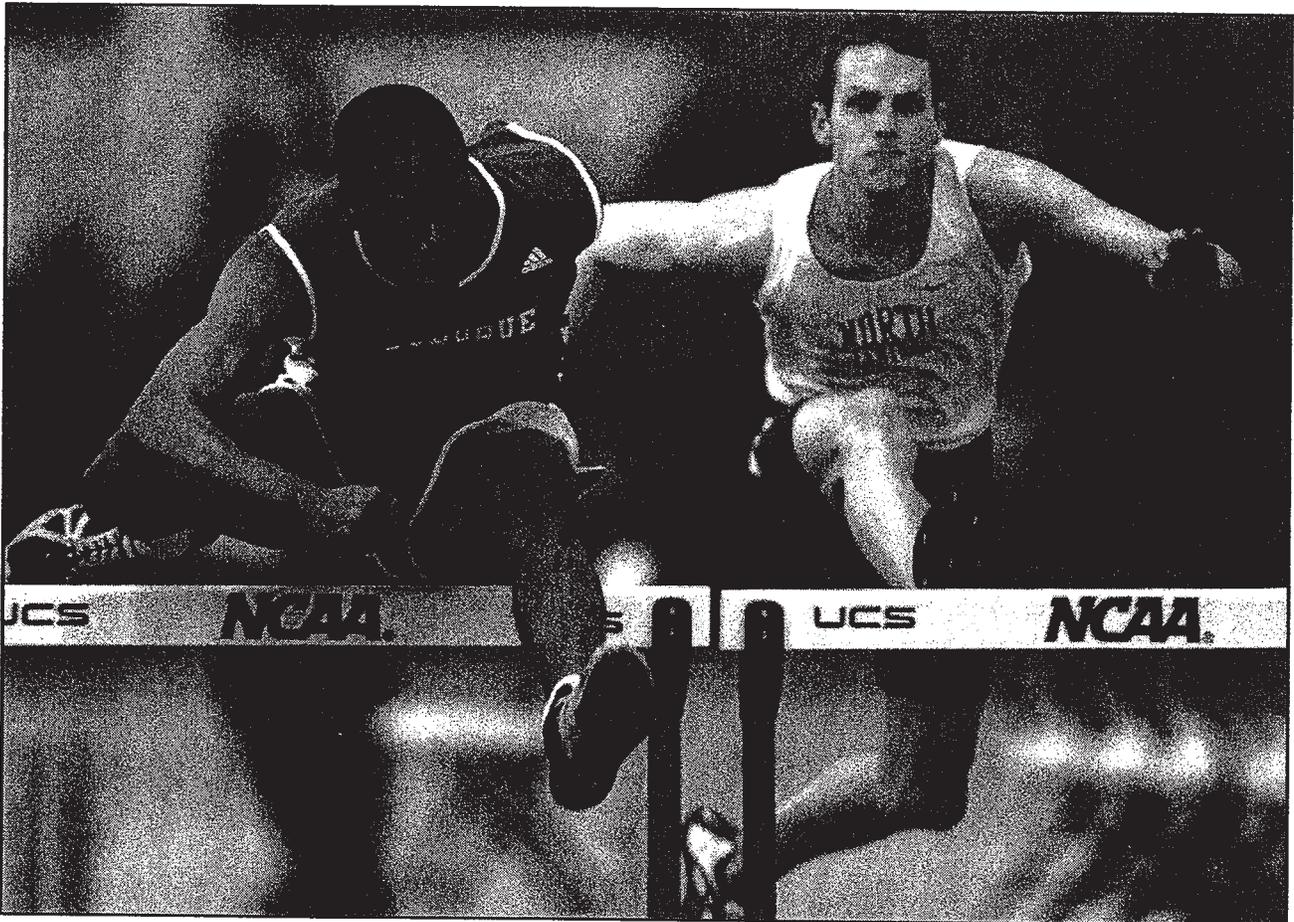

Swimming/Diving

Tennis

Volleyball

Water Polo

Wrestling

Understanding the Factors That Contribute to the Loss of Opportunities for Student-Athletes

In order to effectively fashion ways to help protect the opportunities for student-athletes and coaches to participate in the at-risk and emerging sports, the Task Force spent a significant amount of time identifying and discussing some of the factors that contribute most significantly to the loss of opportunity. Those include the following:

1. Financial constraints

First and foremost among the factors that threaten the ability of a college or university to provide a more diverse athletic experience is the rapidly rising cost of athletics. A series of market factors have combined to create enormous pressure on athletic department budgets. Those include, but are not limited to:

- a) The cost of an athletic scholarship. This is not only one of the largest elements of any athletic department budget, but also it is a cost over which the athletic department has little or no control. An athletic department may, as many have, elect to offer fewer athletic scholarships in a particular sport or eliminate a sport entirely, but it can do nothing to impact the underlying cost of that scholarship, dependent as it is on tuition rates and housing costs.
- b) The rising costs of salaries and employee benefits, compounded by the need to increase personnel assigned to compliance, academic support, and fundraising.
- c) Rapidly increasing costs for insurance and medical care.
- d) A highly competitive environment for personnel and facilities in those "revenue sports" that typically provide much of the funding necessary to operate all other sports.
- e) The important obligation of colleges and universities to add and effectively operate programs that allow schools to provide an equal athletic opportunity to both men and women.

These financial factors are made all the more significant by the separation in many D-I schools of the athletic department budgeting process from the normal school-wide budgeting process, with the

accompanying pressure to establish the financial self-sufficiency of athletics programs. The budget pressure faced by athletic departments across the country and the limited tools available to alleviate that pressure contribute to the creation of an environment where the elimination of entire sports has become commonplace.

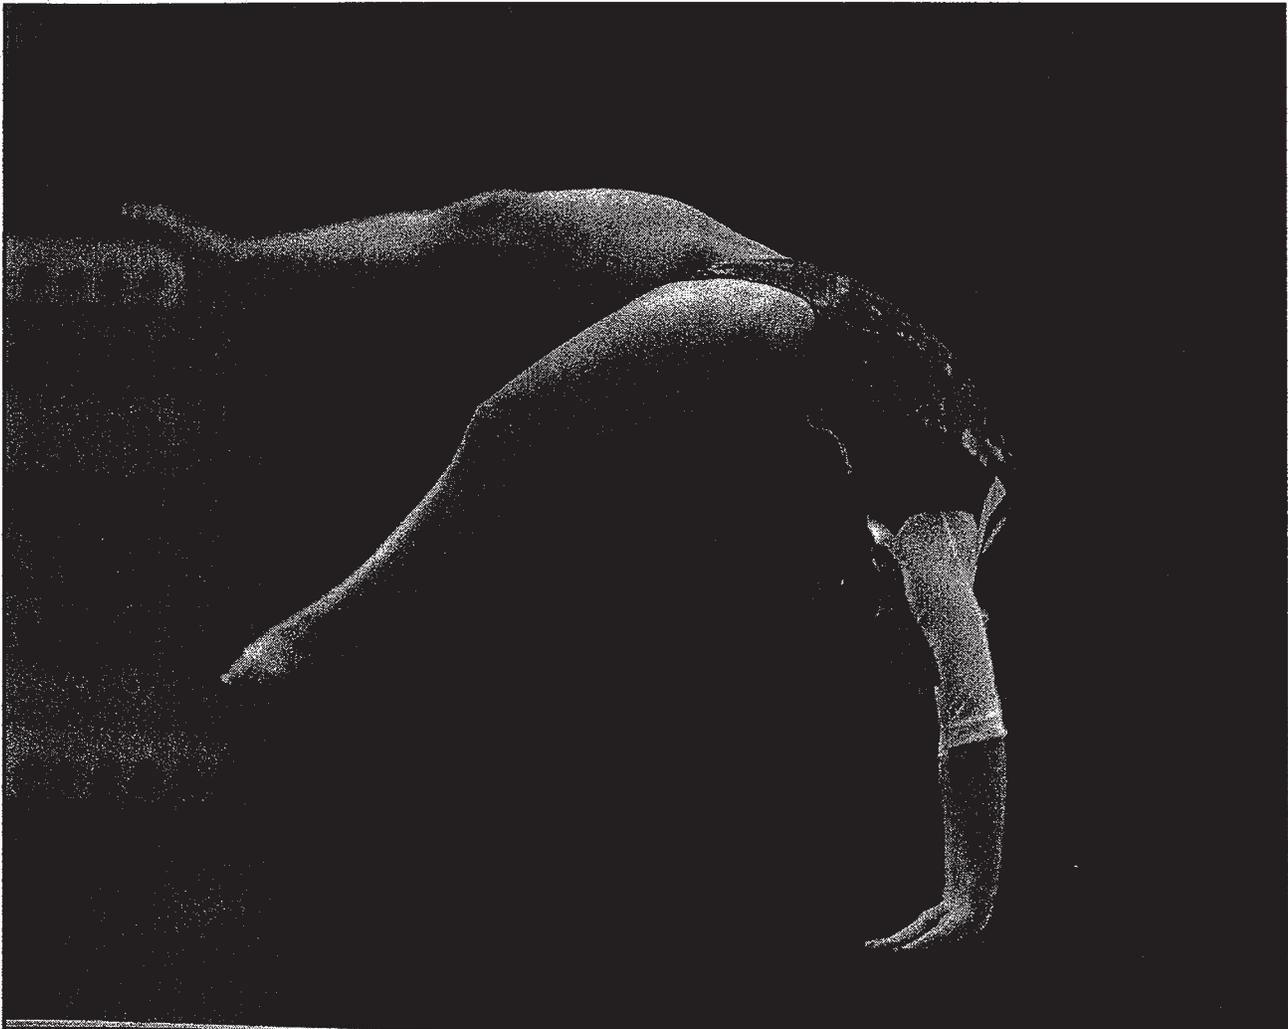

2. Market Dynamics - The Cluttered Marketplace

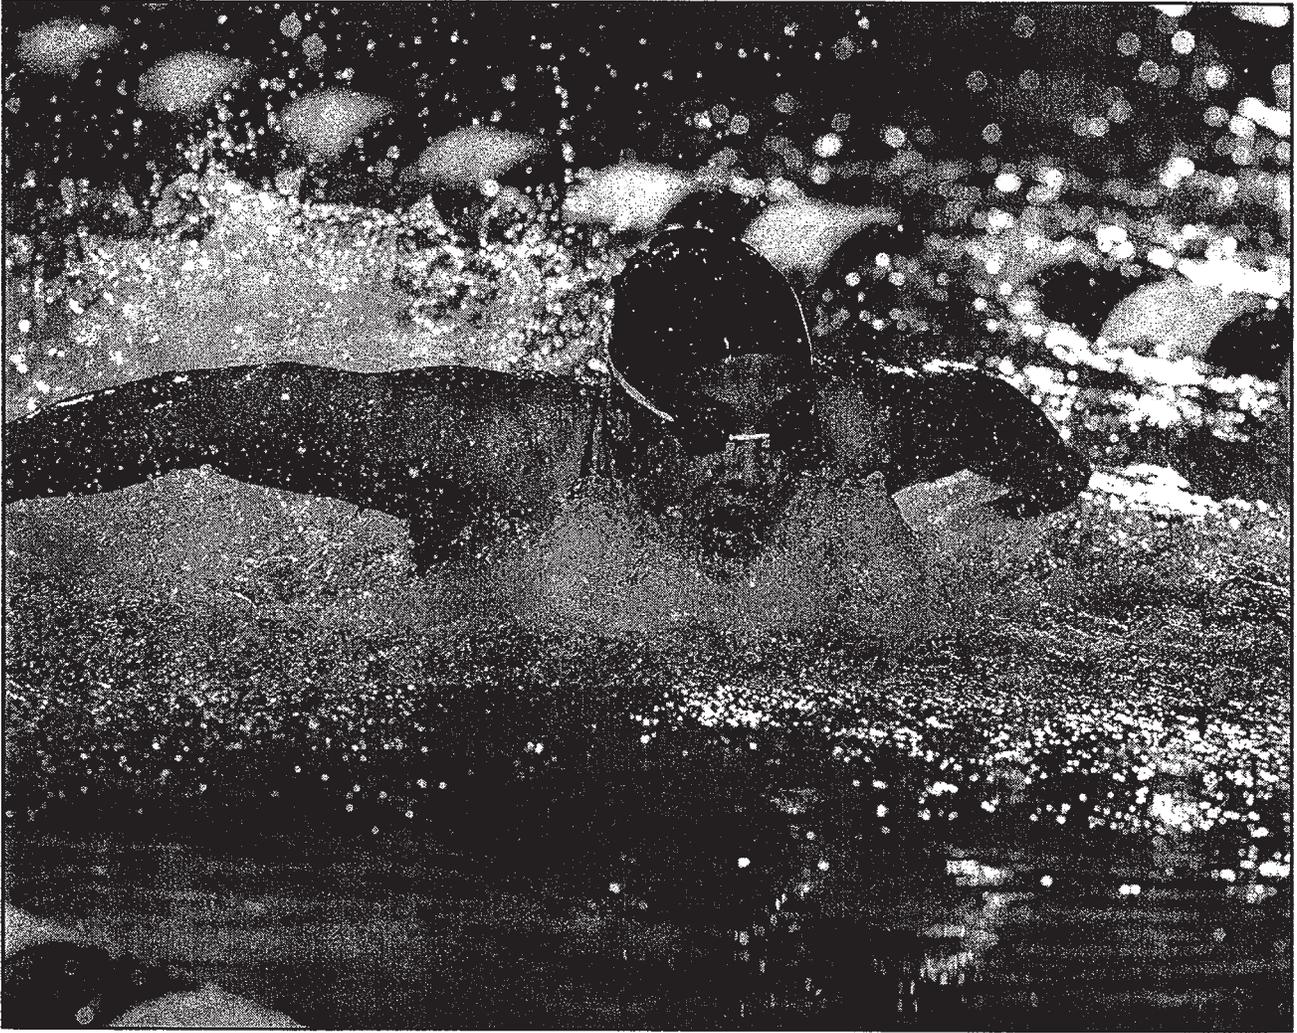

Today, college and university athletic departments operate in an extraordinarily cluttered marketplace. The impacts of this are numerous. On the positive side, the existence of two 24-hour national cable networks devoted to college sports, more than 40 regional sports networks, satellite radio, an endless stream of sports news and special interest programming, and the Internet provide unparalleled levels of exposure. That exposure is occurring, however, in the context of an equally or perhaps even more dramatic growth in other segments of the sports and entertainment marketplace. As a result, the ability to command the attention of what have historically been natural audiences for college sports (students, alumni, and local residents) often becomes more difficult (especially for the non-revenue sports), and the need to both actively promote and explore new streams of revenue becomes greater. Of particular significance as it relates to the work of the Task Force is the fact that this cluttered marketplace can result in a perception of diminished student interest in the at-risk sports when athletic departments consider whether to eliminate a program. (See the 2001 Government Accounting Office Report on "Four Year Colleges' Experience Adding and Discontinuing Teams", GAO-01-297.) This perception can be of critical importance when athletic departments consider ways to reduce expenses.

This dynamic is not unique to college athletics. The same market conditions have created challenges for most of the national governing bodies as they attempt to deal with television and sponsorship markets that tend to place extraordinary value on those few properties that can rise above the clutter and diminished value of almost everything else.

3. Inertia

Especially for the most endangered among the at-risk sports, both the statistical and anecdotal evidence suggests that the elimination of programs tends to encourage the elimination of more programs. As natural rivalries, the critical mass needed to stage a conference championship, or an event of historical significance disappear, it becomes much easier for a school to conclude that the elimination of a sport makes sense. An important corollary to this observation is the fact that among the most endangered of the at-risk sports, the trend toward elimination is likely to continue absent some intervening force. The recommendations that follow are offered in hopes that they can serve as that intervening force.

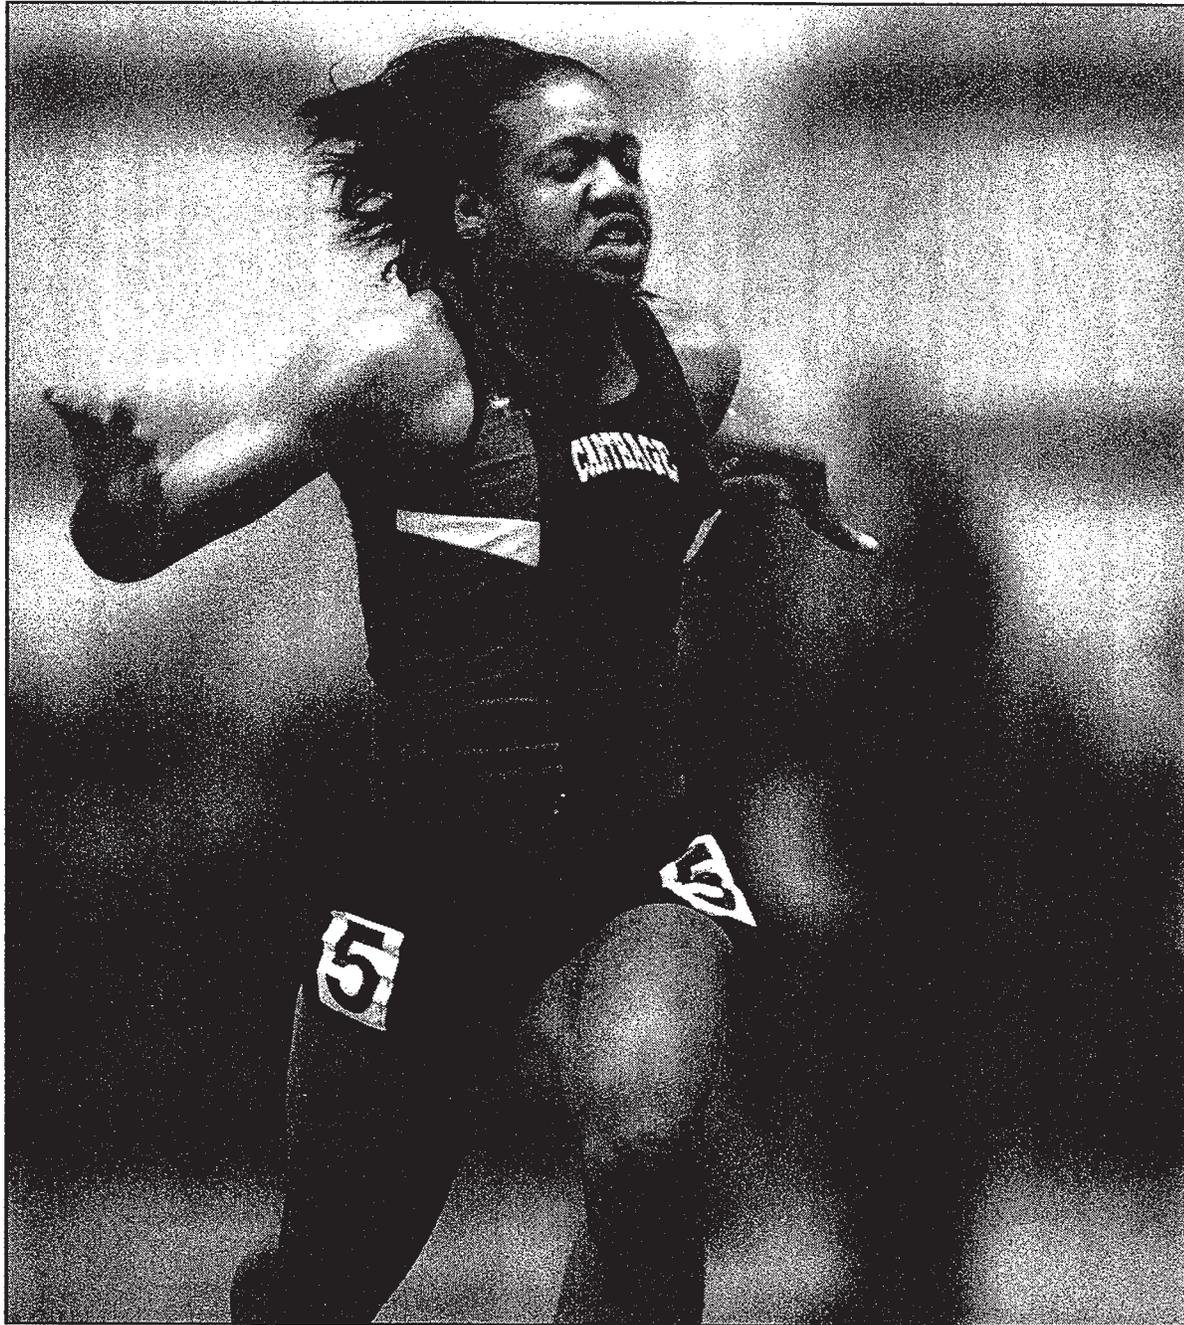

Recommendations

As reflected by the foregoing analysis, the Task Force believes strongly in the importance of protecting the continued vitality of the at-risk and emerging sports as part of a diverse offering of athletic experiences for students at America's colleges and universities. The Task Force also recognizes, however, that achieving that result is a complex and difficult task. There is no "silver bullet" or single solution available, and the situation at each college and university is unique. Furthermore, all indications are that the conditions that have led schools to drop one or more sports will only become more challenging in the years ahead. The enormous economic pressures shaping decisions about the sponsorship of sports among NCAA member institutions are likely to continue to build well into the future.

The Task Force does not conclude from this, however, that its mission cannot be met. On the contrary, the members of this Task Force have come away from their 12-month immersion into this issue with renewed conviction in the importance of the at-risk sports and emerging sports, and a firmly held belief that meaningful progress can be made to ensure the long-term health of those sports as part of intercollegiate athletics in our country. Those sports add important diversity to a school's athletic offerings, provide valuable educational opportunities consistent with the overall mission of the college or university, and help to support America's success in international sports. In addition, participants in many of these sports develop a life-long commitment to physical fitness that both benefits them and provides an important example for fellow students and young people to follow.

It is also important to note that just as there is no single solution, the Task Force believes that it is not possible for any one entity, working alone, to achieve real progress. Instead, it will require the continued cooperation and shared commitment among the two sponsors of this Task Force – the NCAA and USOC – and their member institutions in the implementation of the recommendations that follow. Progress will not come quickly or easily, but it can and will happen.

It will happen so long as all involved understand that maintaining diverse athletic offerings as part of the American collegiate model requires the same sort of passion, diligence, and commitment that is reflected so effectively in the student-athletes we seek to serve.

Increasing the Resources Available to Support the At-Risk and Emerging Sports

Recommendation 1

The NCAA and USOC should jointly make an ongoing investment in (while also seeking the investment of others) a new independent charitable foundation for the purpose of fostering the sponsorship of Olympic sports by America's colleges and universities. This foundation should be in place and operational early in 2006.

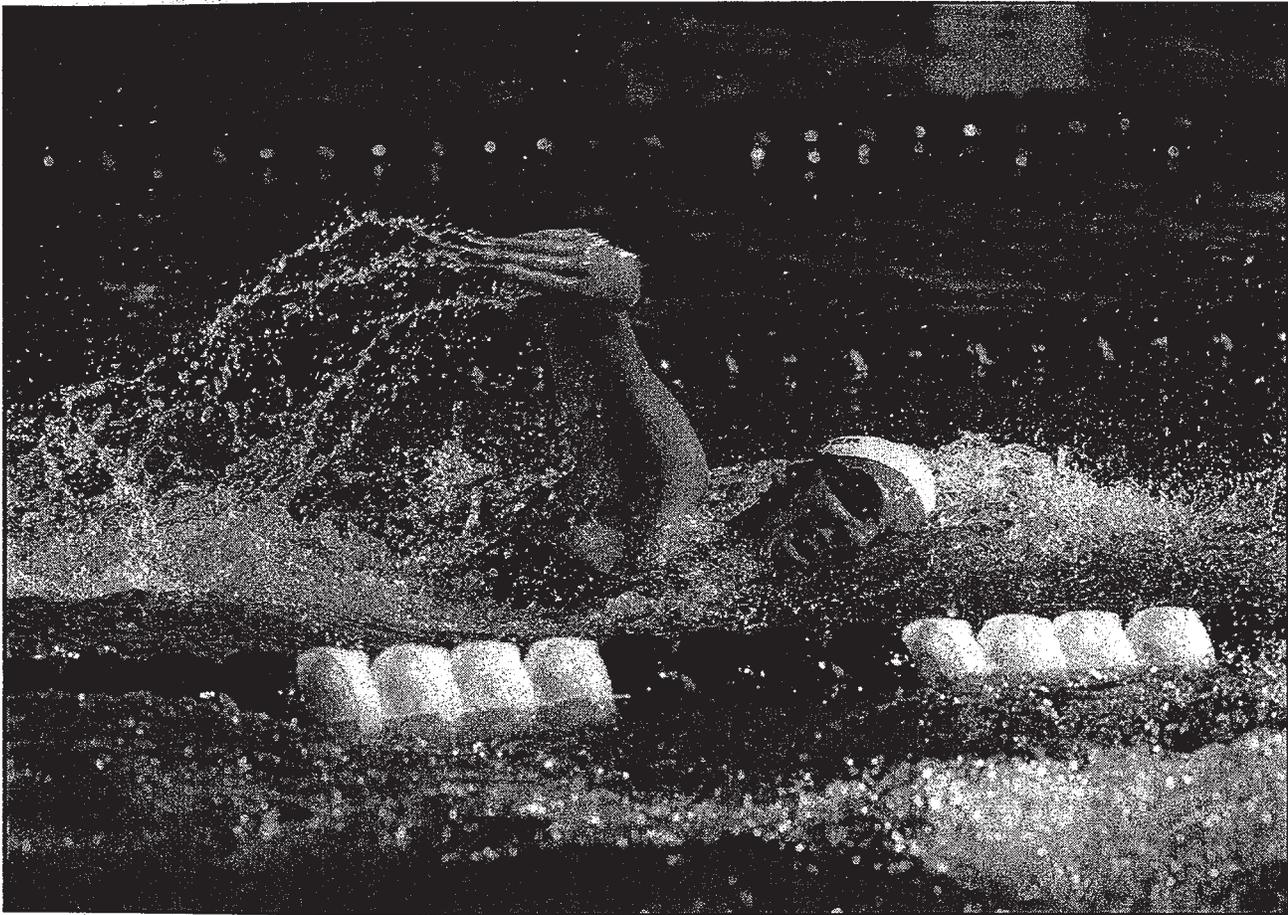

Rationale. This is the first of the Task Force's recommendations because it is the most important, the most urgent, and the most impactful. Ensuring the continued vitality of Olympic sports as part of intercollegiate athletics requires additional resources. If we cannot find ways to increase those resources – the resources necessary to ensure vigilance, provide management, underwrite core functions, and fund innovation – the trend toward the elimination of the at-risk sports will undoubtedly continue.

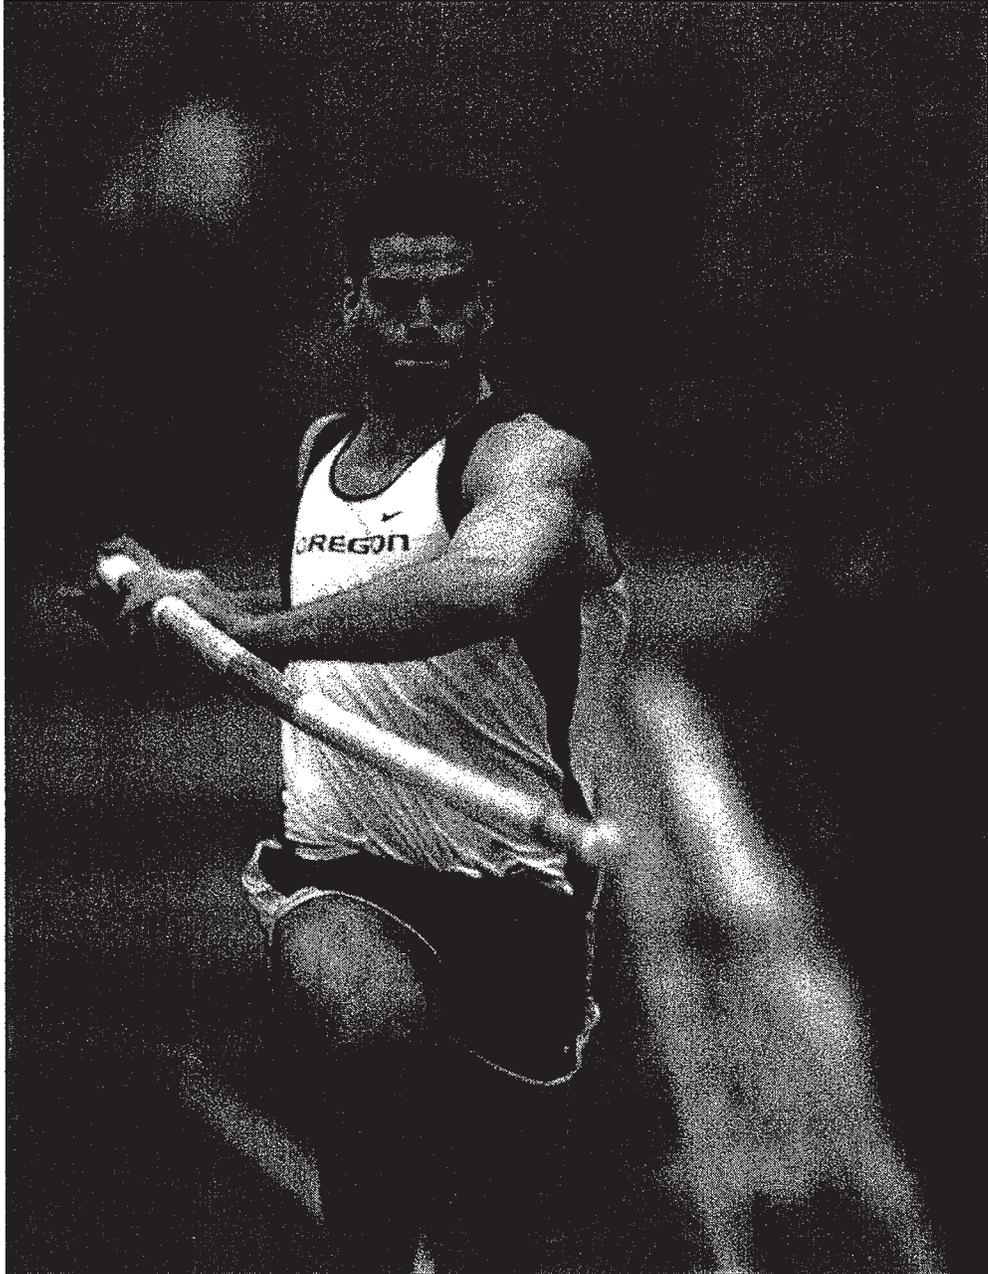

In 1995, the NCAA and USOC joined together to create the Conference Grant Program. Between 1995 and 1997 this program distributed \$8 million in grants to collegiate conferences to help fund activities related to Olympic sports. Grants were made, for example, to establish a new sport confederation, underwrite conference championships, assist in getting events broadcast, and upgrading club programs to varsity status. This program made a significant contribution to the preservation of Olympic sports as part of the intercollegiate athletic landscape. However, the program had two limitations inherent in its structure which must be addressed in establishing the new entity proposed in this recommendation. The proposed entity must leverage any investment made by the NCAA and USOC to produce significantly greater resources that will be available to aid the at-risk and emerging sports, and it must be established with the expectation that it will play an ongoing role in the preservation of these sports.

Implementation. The model for this program should have the following characteristics:

- Ongoing independent entity with directors appointed by USOC and NCAA. Given the anticipated fund management and fundraising aspect of this entity, the board of directors should be of sufficient size and clout to be able to effectively assist in these matters. One model for consideration would be an eighteen or twenty-one-person board with 1/3 appointed by the USOC, 1/3 by the NCAA and 1/3 independent directors.
- Status as a public charity under Section 501(c)(3) of the Internal Revenue Code.
- A pro forma that creates a goal for building a corpus of at least \$60 million by the end of year five. (A preliminary version of a pro forma reflecting that goal is included in Appendix C.) Achieving this will require a meaningful multi-year seed investment by the NCAA and USOC, but the independence of the new entity also creates an opportunity to build the corpus through:
 - government earmarks
 - foundation grants
 - charitable gifts
- Unless otherwise required by founders, only the interest on the corpus would be available to fund operations, implement recommendations and make investments in the at-risk sports.
- A “competitive” grant making process in order to encourage the identification of the best ideas.
- Beyond the financial resources it might provide, a critical component of this recommendation is the potential of the new entity to have staff responsible for implementing the strategies needed to advance the mission identified in this Report. This contemplates a small staff and low overhead operation, but it is critical to have people in place who can:

- effectively leverage (not duplicate) and coordinate the efforts of others,
- manage the grant process,
- raise funds, and
- manage the awareness and advocacy functions.

Building Awareness and Commitment

Recommendation 2

Establish a program to encourage the widespread adoption of the following value statement for maintaining broad-based intercollegiate athletic programs in the United States:

[Insert name of organization or institution] believes that participation in intercollegiate athletics represents a uniquely valuable educational experience for student-athletes and enriches the quality of campus life generally. As such, there is great benefit, consistent with the academic mission of American colleges and universities, in ensuring that diverse athletic opportunities are available to students, especially in those sports that connect to the Olympic ideals, inspire young people and attribute to a lifelong commitment to fitness. We are committed to doing all we reasonably can to help ensure that those diverse athletic opportunities continue to exist as part of intercollegiate athletics in America.

Rationale. Any attempt to address the declining sponsorship of the sports identified in this Report must begin with an effort to create greater awareness of the threat and a stronger commitment to address it. Building awareness requires a fundamental change in the tone and tenor of the discussion that surrounds this important issue. The decision on the fate of the at-risk and emerging sports in American colleges and universities lies exclusively with the academic institutions which sponsor those sports as part of their intercollegiate athletic program. As such, the discussion cannot revolve around America's performance in the Olympic Games, the impact of Title IX, or some sense of historical entitlement; it must instead center on the relationship between the sponsorship of these sports and the academic mission of the sponsoring college or university. The Task Force believes that the proposed

value statement effectively makes that connection, focusing as it does on the benefits to the students that result from offering diverse athletic opportunities.

Implementation. In the first instance, this value statement must be adopted by the NCAA and the USOC (through their traditional governance mechanisms). If the two sponsors of this Task Force do not adopt the statement, there is little prospect for others doing so. Assuming adoption by those two entities, an effort must then be made to foster a widespread adoption of the principles throughout the Olympic and collegiate sports families. Beyond adoption by the national governing bodies and NCAA member institutions, every effort should be made to have the statement adopted by important constituent and operating groups within the collegiate and Olympic sports structure (e.g. NGB Council, USOC Athletes Advisory Council, NCAA's Student-Athlete Advisory Committee, Faculty Athletic Representatives Association, Collegiate Commissioners Association, National Association of Collegiate Athletic Directors, National Association of Collegiate Women Athletics Administrators, various collegiate coaches associations, etc.) as well as influential independent organizations like the Knight Commission.

Recommendation 3

a) Establish an electronic syndication system to identify and distribute to media outlets (including, in particular, campus newspapers and local papers in college towns) news and features related to the at-risk and emerging sports and the student-athletes and coaches who participate in them.

b) Create a continuing education program to help coaches become more effective advocates for their programs within the university community. This program, although developed centrally for use across all sports, should be

administered through the national governing bodies and/or sport-specific coaches' associations.

c) From among the excellent materials that have already been created by sports like wrestling, swimming and tennis, identify and share best practices for responding to a threatened elimination of a program. This process should result in the production of a standard set of materials that can be easily modified to fit the needs of the individual sports.

Rationale. When a sport faces elimination, those affiliated with the sport and the college or university typically engage in a vigorous campaign to preserve the sport. Sometimes those campaigns succeed; more often they do not. That experience suggests that a more effective advocacy strategy requires:

- a) regular, effective, and targeted communication about the value of these sports to the college or university,
- b) effective training of collegiate coaches to make them better and more engaged advocates for their sports, and
- c) a sharing across sports of best practices for responding to the potential elimination of an at-risk or emerging sport.

Implementation. The implementation strategy identified in Recommendation 1 above is central to these recommendations, but so too is the active role of the impacted national governing bodies in working closely with their sports collegiate coaches. In order to ensure this result, those NGBs are encouraged to have a person on staff who has as a principal job responsibility assisting in the implementation of these recommendations.

Altering the Value Proposition Represented by These Sports

Recommendation 4

Promote models for more effectively utilizing existing at-risk and emerging sport programs to support:

- Sport-specific community outreach,
- The training of elite athletes in Olympic sports,
- Hosting of events (creating a presumption in favor of awarding events to university facilities whenever possible). Those events need not be limited to those involving college athletes. Any event that effectively promotes the sport and/or brings additional revenue to the school is a candidate to be hosted by the college or university.

Rationale. When a college or university administrator is searching for ways to trim expense in his or her athletic budget, the perception of the value contributed by an at-risk or emerging sport becomes of critical importance. It is incumbent on all who care about the future of these sports to attempt to positively impact the value proposition presented by these sports. One way to do this is to use the college or university asset that (relative at least to the sports national governing body) is unique – the sport facility – to produce additional value for the college or university. The specific concepts identified in this recommendation are intended to be illustrative rather than exhaustive. The key to the recommendation is finding ways to create greater value – whether that value takes the form of service to the community, enhanced exposure for the university, or additional revenue.

In discussing the rationale for this recommendation it is worth emphasizing that in examining some of the best run programs in the at-risk sports, the Task Force typically encountered compelling examples of how a dedicated and creative coach had managed to use his or her sport to advance the university's mission in the community. So, for example, the facility that served as home to the

collegiate program might also offer creative sports programs to members of the community and actively pursue the hosting of non-collegiate events.

Implementation. The implementation strategies are likely to vary significantly by sport. For sports like gymnastics, water polo, volleyball and rifle, the number of D-I schools sponsoring the sport is so low that it would seem possible to develop very specific programs for each school. In other circumstances where the number of sponsoring schools remains high, this effort may revolve around the sharing of best practices. In either case, however, the national governing body has a special responsibility to encourage its collegiate coaches to take the steps necessary to change the value proposition of the sport for the university.

Identifying Preferred Strategies for Controlling Costs

Recommendation 5

Conduct a survey of the NCAA membership to identify the preferred strategies to be implemented to control the costs associated with operating the at-risk and emerging sports. The survey should be completed and the resulting data available for review by April, 2006.

Rationale. Just as it concluded that the creation of new resources is critical to the continued viability of the at-risk and emerging sports, the Task Force believes that the pressure to control costs will continue to have a very significant impact on the operation of college and university athletic departments. Given the relatively small size of the budget for these sports, the Task Force recognizes that achieving meaningful cost containment or savings can be particularly painful. It is for that reason that the Task Force believes that, before pursuing particular strategies, the NCAA membership should be surveyed to determine which forms of savings offer the best hope for achieving meaningful cost containment.

Implementation. Conduct a survey of athletic directors, senior woman administrators, head coaches, and a representative number of athletes at schools that sponsor the at-risk or emerging sports, as well as the executive directors and program directors for the related national governing bodies to determine their view of cost reduction strategies in categories such as:

- Reduced competition,
- Reduced scholarships,
- Cross division competition, and
- Reduced travel.

The survey will be produced, distributed, and compiled by the NCAA's research staff with oversight by the Task Force.

Increasing the Marketability of the At-Risk Sports

Recommendation 6

- a) Consider modification of the NCAA amateurism, participation, and competition rules to increase the likelihood that some of the most accomplished athletes in the at-risk and emerging sports will continue to participate in collegiate athletics.
- b) Explore ways to more effectively leverage the event management and marketing resources of the NCAA and NGBs to develop new events and/or market existing events in order to more effectively highlight collegiate competition in at-risk and emerging sports while also bringing additional revenue to those programs.

Rationale. With increasing frequency, America's best athletes in the Olympic sports forego the opportunity to participate in intercollegiate athletics. That is a loss for both the individual athlete and the university. When that decision is based on the unwillingness of an athlete to be bound by the principles of amateurism that are central to the American intercollegiate athletic model, there is nothing to be done. But where an athlete's decision to forego intercollegiate athletic competition is based upon the inability of the NCAA model to accommodate the unique training and competition requirements of an elite athlete, then perhaps a re-examination of the rules that create that conflict is appropriate. In the experience of the members of the Task Force, discussions about the types of rule modifications contemplated by this discussion often run into resistance from coaches who fear that an unfair competitive advantage may result. The Task Force understands well the pressure coaches feel to achieve competitive success and the importance of maintaining a level playing field for intercollegiate competition. At the same time, however, these risks must be evaluated in the context of the greater risk to the very existence of the sport on a college campus or in the overall intercollegiate athletic program.

There are compelling examples of how events in the so-called "non-revenue" sports have achieved extraordinary success. The recent history of the NCAA lacrosse championship is one such case, and many of the sports identified in this Report as being at-risk (e.g. wrestling, women's gymnastics, men's swimming) already stage highly successful collegiate championships. Without exception, however, the opportunity exists to do more. This is especially true because the emergence of CSTV, ESPNU and Fox College Sports creates a significant new demand for collegiate sports programming.

Implementation. The national governing bodies with elite athletes who have foregone the opportunity to participate in intercollegiate athletics are requested to survey a representative sample of those athletes in order to better understand the nature and relative importance of the factors that contribute to the athlete's decision. That information should then be submitted to the NCAA's Olympic Sport Liaison Committee which will review it and consider what, if any, modifications to the NCAA's rules it might recommend.

Relative to the enhancement of intercollegiate events in the at-risk and emerging sports, the critical first step in effective implementation involves establishing meaningful communication among the event staffs at the NCAA, conferences, and national governing bodies. To accelerate the creation of effective communication, the Task Force recommends that a collegiate sports event summit be convened under the auspices of the foundation created in response to Recommendation 1 above.

Aligning the Rules to Support the Mission

Recommendation 7

Work closely with the NCAA's Olympic Liaison Committee to develop a package of legislative proposals designed to protect and expand the opportunities for student-athletes to participate in the at-risk and emerging sports. Among the potential areas of focus for these legislative changes are the following:

- Modification of the sport sponsorship rules to include some modest reward for sponsoring these sports.
- Lessening of restrictions on training time for athletes who have achieved a certain high standard of academic performance.
- Expanding the circumstances under which athletes not currently enrolled in a college or university may practice and/or use university facilities with student-athletes and college coaches.
- Further relaxation of amateurism rules to perhaps:
 - limit consequences of money earned in Olympic sports prior to entering college
 - giving greater deference to funds paid by or through the NGB,
- Facilitate the underwriting of athletic scholarships by third parties including but not limited to the USOC or the NGBs.

Rationale. Much work already occurs in the area of legislative reform, but the significance of this recommendation lies in the proposal to undertake a comprehensive review of the options in order to produce a full package of proposed legislation. The examples of potential areas of focus identified in the recommendation are intended to be illustrative only. There are, no doubt, other areas of inquiry and specific proposals that merit careful consideration.

Setting Goals to Measure Progress

Recommendation 8

Set numerical goals for maintaining and adding programs in the at-risk sports, issue an annual report of the industry's progress in furtherance of the goals, and offer special recognition of those schools and NGBs who have most effectively contributed to the solution (and those who have not).

Rationale. Athletics is all about pushing oneself to achieve stretch goals. This effort should do no less.

Implementation. The three elements of this recommendation would all be implemented by the charitable foundation identified in Recommendation 1.

Concluding Statement

During the past 15 years, colleges and universities included among the NCAA's Division I membership dropped 594 programs in the sports that are the focus of this Report. The members of the Task Force understand well that none of these decisions were made lightly or easily. Each represented a difficult choice made under a unique set of circumstances and in the context of ever-growing financial pressures. But those circumstances, no matter how compelling, cannot mitigate the very real loss associated with a decision to eliminate a sport from a college or university athletic program. If, for example, we assume an average squad size of 20 athletes, the elimination of 594 programs, means that since 1990, nearly 12,000 student-athletes experienced the loss of an activity that was central to their educational experience – perhaps even the reason they chose to attend the school at which they were a student-athlete. And a much larger number of prospective student-athletes lost the opportunity to ever reap the benefits of participating in the sport they loved at that school. A decision to eliminate a sport also means that coaches who may have been among the institution's best educators may no longer be able to use the school's arena, field, or pool as a place to teach young people. It means that a potentially valuable link to the university's past has been lost. And, it means that the unique (and uniquely valuable) role played by America's colleges and universities in preparing coaches and student-athletes to represent the United States in international competition has been diminished.

It is those very tangible consequences flowing from the elimination of sports that caused the NCAA and USOC to take the unusual step of forming this Task Force for the purpose of examining ways to reverse the trend. Both organizations are to be commended for their willingness to work cooperatively in a search for solutions, and both are (along with their members) encouraged to build upon the momentum they have helped to create by aggressively pursuing the recommendations set forth in this Report. There is no single recommendation that can reverse a trend that has developed

over a quarter of a century. But this Task Force believes that, taken as a whole, the recommendations in the Report can and will make a difference -- a difference that ensures that future generations of student-athletes and coaches will continue to benefit from participation in diverse athletic programs.

APPENDIX A
