Johnson & Johnson

Cataracts naturally form as our eyes age

Everyday tasks like reading, driving, and recognizing faces become more difficult. But the good news is that cataract surgery is one of the safest and most common procedures performed worldwide—offering an effective way to restore vision.¹

At the time of cataract surgery, you have the opportunity to enhance your vision with the TECNIS PureSee™ lens.

Speak to your doctor about the lens* options that are right for you.

Cataract Surgery Process*

- 1 Remove the clouded lens.
Your cataract is carefully removed through a tiny incision.
- 2 Insert the new lens.
Your surgeon replaces your original lens with the TECNIS PureSee™ lens.
- 3 Enjoy revitalized vision.
Experience clear, vibrant vision all while relying less on glasses.^{2*}

*Results may vary. Consult your doctor to determine the lens options that are right for you.

Proven results you can trust

TECNIS™ lenses, by **Johnson & Johnson**, are backed by 25 years of innovation. Every year, millions of patients worldwide choose TECNIS™ lenses for their cataract surgery.³

In a clinical study, patients were asked about their experiences with the TECNIS PureSee™ lens:

90% of patients occasionally or never wore glasses^{2*}

97% of patients would recommend the lens to friends or relatives⁴

97% of patients did not experience very bothersome visual disturbances²

“The procedure has been life-changing, I can go to the gym, follow programs on my phone without having to keep taking my glasses on and off. In spin classes, I can actually see the dial now so it’s made a huge difference and I’m so pleased I’ve had it done.”

— Kelly, TECNIS PureSee™ Patient

Actual patient quote; patient information has been changed to protect the identity of the individuals.

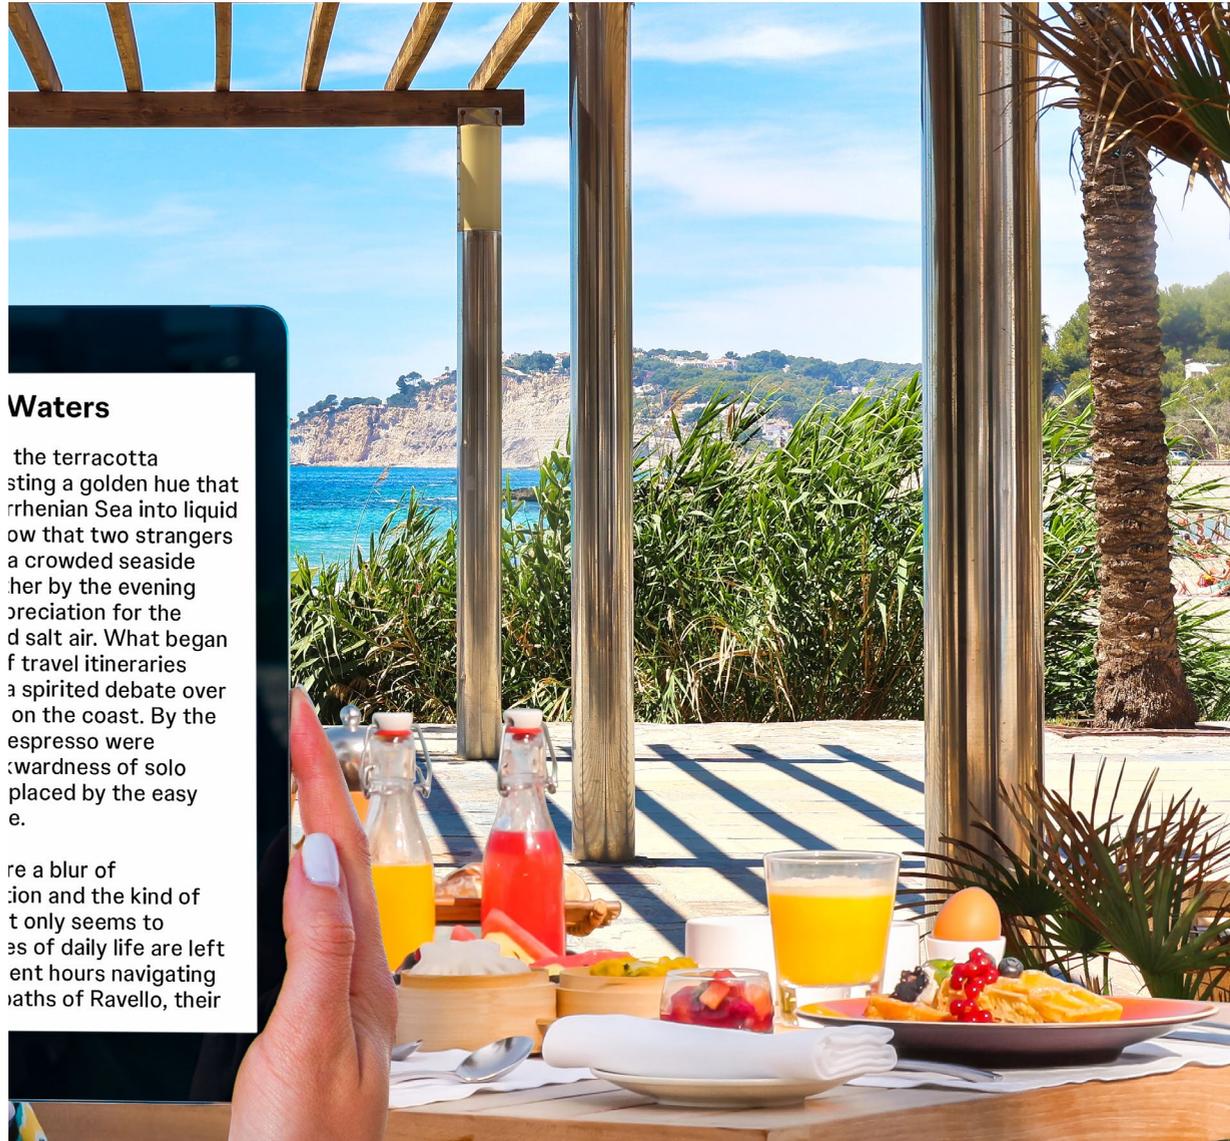

*Overall spectacle wear at 6 months, selections were “none/a little of the time, some of the time”.

Benefits of TECNIS PureSee™ IOL

Your choice of lens makes a difference. While monofocal lenses can help you see far away, the **TECNIS PureSee™** lens uses advanced technology² so that you can rediscover your world with the clarity and visual freedom you deserve.

Excellent distance and intermediate vision with some near vision.*² You may still need reading glasses for small print.

Low level of bothersome visual symptoms²

Vibrant vision,² day and night

TECNIS PureSee™ may not be suitable for everyone. Consult your doctor to determine if it's right for you.

Ask your doctor if TECNIS PureSee™ is right for you.

*TECNIS PureSee IOL achieved a 1.5-line difference in mean monocular distance-corrected near VA at 6 months compared to TECNIS 1-Piece.

INDICATIONS and IMPORTANT SAFETY INFORMATION for TECNIS PureSee™ IOL with TECNIS SIMPLICITY™ Delivery System and TECNIS PureSee™ Toric II IOLs with TECNIS SIMPLICITY™ Delivery System

CAUTION: Federal law restricts this device to sale and use by or on the order of a physician. **INDICATIONS FOR USE:** The TECNIS SIMPLICITY™ Delivery System is used to fold and assist in inserting the TECNIS PureSee™ IOL, Model DEN00V, which is indicated for primary implantation for the visual correction of aphakia in adult patients with less than 1 diopter of pre-existing corneal astigmatism in whom a cataractous lens has been removed. The lens mitigates the effects of presbyopia by providing an extended depth of focus. Compared to an aspheric monofocal IOL, the TECNIS PureSee™ IOL provides improved intermediate visual acuity, while maintaining comparable distance visual acuity. The lens is intended for capsular bag placement only. The TECNIS SIMPLICITY™ Delivery System is used to fold and assist in inserting the TECNIS PureSee™ Toric II IOLs, Models DET150, DET225, DET300, and DET375, which are indicated for primary implantation for the visual correction of aphakia and for reduction of refractive astigmatism in adult patients with greater than or equal to 1 diopter of preoperative corneal astigmatism in whom a cataractous lens has been removed. The lenses mitigate the effects of presbyopia by providing an extended depth of focus. Compared to an aspheric monofocal IOL, the TECNIS PureSee™ Toric II IOLs provide improved intermediate visual acuity, while maintaining comparable distance visual acuity. The lenses are intended for capsular bag placement only. **CONTRAINDICATIONS:** None **RISK:** Routine cataract surgery risk, irrespective of lens selection, could be minor, temporary, or affect patients' vision permanently. Rare complications are worsening of vision, bleeding, or infection. Patients should discuss all risks and benefits with their eye doctor before surgery. **PRECAUTIONS:** Recent contact lens usage may affect the patient's refraction; therefore, in contact lens wearers, surgeons should establish corneal stability without contact lenses prior to determining IOL power. Prior to surgery, the surgeon must inform prospective patients of the possible risks and benefits associated with the use of this device and provide a copy of the patient information brochure to the patient.. The safety and effectiveness of the TECNIS PureSee™ IOL have not been substantiated in pregnant women, patients under the age of 22 or those with preexisting ocular conditions and intraoperative complications. **WARNINGS:** Physicians considering lens implantation should weigh the potential risk/benefit ratio. Well-informed patients with well-defined visual needs and preferences should be selected for lens implantation.
