Vision

Presbyopia is a gradual, natural blurring of sight at close distances. You might already be aware of presbyopia as the reason you need to wear reading glasses.

**But here's something you may not know: cataract surgery can be a great opportunity to address your presbyopia along with your cataract.**

# YOUR LIFE ISN'T LIVED AT ONE DISTANCE.

A range of vision that's  
as dynamic as your life.

From working at computer  
screens to reading in  
low-light, our vision needs  
change from moment to  
moment. What if you  
could see clearly from  
all distances and levels  
of light?

## PRESBYOPIA

Age

# 40

Typically becomes  
noticeable around  
the age of 40<sup>3</sup>

Makes it difficult to  
focus on things up  
close (near vision)

Can be addressed  
with a presbyopia-  
correcting IOL

Other solutions  
include reading  
glasses, contacts or an  
additional surgery

**TECNIS Synergy™ OptiBlue™ IOL**  
enables you to see at your ideal  
distances, and delivers high-quality  
vision you can trust day and night.<sup>1,2</sup>

With presbyopia
