

AI Security Maturity Model™ eBook

A Practical Framework for Building a Mature AI Security Program

Author:

Chris Cochran

Field CISO and VP of AI Security
SANS Institute

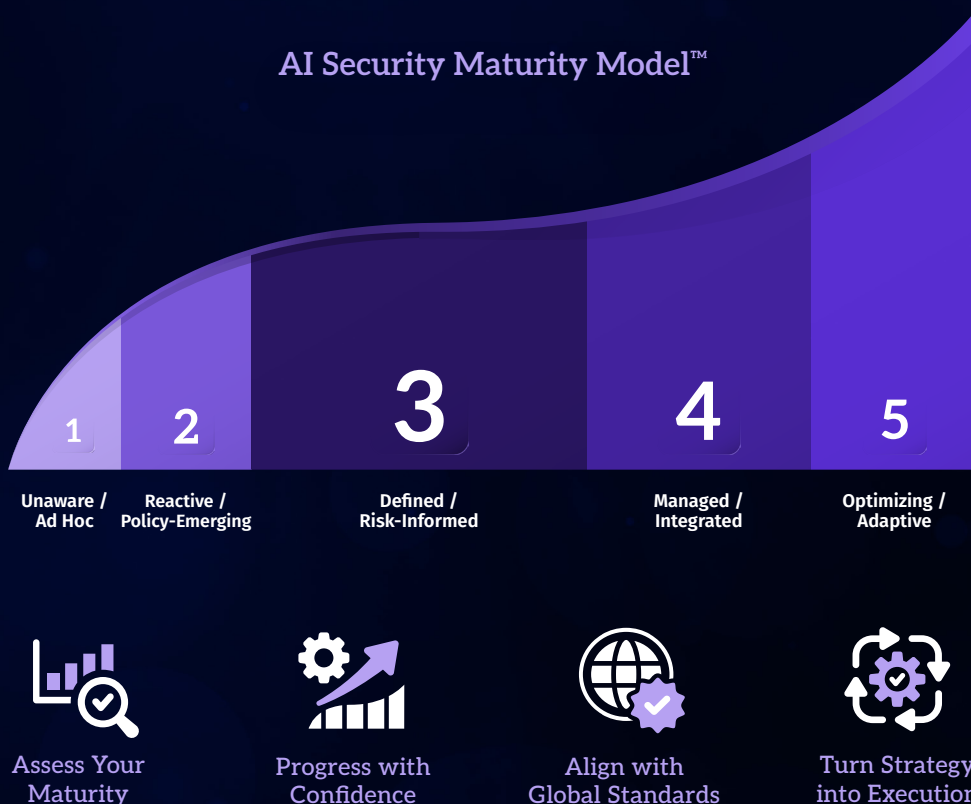

AI Isn't a Threat to Your Organization. Deploying It Faster Than You Can Govern It Is.

Employees are adopting AI tools faster than policies can catch up. Unverified models are finding their way into workflows across every team, from engineering to operations. The risks (data leakage, compliance exposure, and AI-augmented threats) are compounding at machine speed.

The **SANS AI Security Maturity Model™ eBook** gives you and your team a clear, actionable roadmap for understanding where your organization stands on AI security and exactly what it takes to get to the next level.

"The 'right' level of maturity is not universal, it is determined by your organization's specific AI adoption pattern, industry, regulations, and risk tolerance."
