

#SecureTheFamily

Don't Make It Easy for Them

Total cybercrime losses reported to the FBI passed \$20 billion in 2025 for the first time. Very little of it required a sophisticated attack. Most of it walked in through reused passwords, unpatched devices, public accounts, and a moment of panic on a phone call. Check off each item below as a family, tonight.

☐

Turn on automatic updates

Every device, every person in the household

☐

Move passwords into a password manager

Long, unique, done. No more reused passwords across accounts

☐

Turn on multifactor authentication

Email, banking, and anything with a card attached, at minimum

☐

Set accounts to private, kids' and yours

Public family videos are the raw material for the voice-clone scams in Conversation 1

☐

Confirm the family code word

From Conversation 1. Say it out loud together once so everyone remembers it

☐

Say the sentence

"You will never be in trouble for telling me." From Conversation 2.
Said once, out loud, before it's ever needed.

That is the whole program. No fear, no new gadgets, one evening.
Don't make it easy for them.
