MORNINGSTAR Indexes

FTP.CRSPMI.ORG Certificate Renewal on November 20, 2026

On November 20, 2026 at 2pm CT, Morningstar Indexes will renew the security certificate for FTP.CRSPMI.ORG. This year the certificate will be issued by a new certificate authority, DigiCert, in place of Sectigo.

Whether this affects you depends on how your firm connects:

SFTP (port 22): No action is required. The server's SSH host key is not changing.

FTPS (FTP over TLS): Most clients will connect without changes, as the new certificate chains to a publicly trusted DigiCert root. Action is only needed if your firm has:

- Pinned or whitelisted the current certificate thumbprint — update it to the new thumbprint below, effective November 20, 2026.
- Restricted trust to the current Sectigo issuing chain — add the DigiCert root certificate to your trust store before November 20, 2026.

New certificate thumbprint (FTP.CRSPMI.ORG):

SHA-1: EB902742423F2FF5DF418028D1CE45192DAA8F5E
SHA-256: C132CBE3B85F22A8E00CCC8445DB26377070E2972CCB8426A8813EC8C70631D9

The server hostname, ports, and your username and password will not change.

If you are not sure whether either of the above applies to your firm, please forward this notice to your IT or technical teams. Morningstar also encourages all clients to connect via SFTP instead of FTPS to ensure secure access.

For questions regarding this notification, please contact indexes@morningstar.com.
