

When Data Resides on Sovereign Soil

How a sovereign cloud facilitates compliance

There's a rising need for cloud and data sovereignty

Digital transformation brings massive opportunity—along with increased complexity, residency considerations, security risks, and plenty of privacy concerns and regulations. Organizations are beginning to see the vulnerabilities around data.

69%

feel confidential data is very/extremely vulnerable in a public cloud¹

63%

say it is very/extremely important to have a cloud solution that provides complete jurisdictional control and authority over data²

42%

are very/extremely concerned about critical data being managed by U.S. cloud providers³

To find the agility you need for the fastest path to cloud, you must be able to overcome several challenges.

- 1. Ensuring compliance for critical and regulated workloads.** With constantly evolving regulatory requirements, it's important to have personnel with the right expertise to help you stay compliant.
- 2. Managing the risk of unproven and uncertified infrastructure.** Even with the right processes and people in place, security breaches can happen. That's why you need a trusted infrastructure on which to deploy critical workloads.
- 3. Addressing existing workloads and preparing for the future.** During cloud transformations, you must quickly migrate existing applications. You also need to find additional services for future workloads.

It's imperative that you keep up with existing and emerging regulations impacting sensitive information to keep data secure and in adherence with regulatory requirements. As such, data sovereignty should be factored into your plans for digital transformation.

1-3. IDC, "Deploying the Right Data to the Right Cloud in Regulated Industries." Document No. US47726321. June 2021.

That's why the VMware Sovereign Cloud initiative was created

Through this initiative, VMware connects you with sovereign cloud providers that offer the cloud services you need to manage your most critical data.

Continuously meet compliance and security requirements for your most critical workloads.

- Gain a Cloud Verified stack that delivers cloud IaaS with VMware's best-in-class solutions
- Benefit from security built into every layer (compute, storage and networking)
- Find vSphere at the heart of the stack, used by over 300K customers worldwide

Ensure deployment on a trusted, hardened and proven infrastructure.

- Migrate existing workloads quickly (no refactoring needed for vSphere workloads)
- Use data and developer services to build future apps
- Leverage a large partner ecosystem for your specific business needs, such as KMS and AI/ML

Move with agility while future-proofing.

Explore what you can do with VMware Sovereign Cloud provider TietoEVRY

Climb to sovereign cloud success with TietoEVRY's best-in-class services and offerings.

Place the right data in the right cloud with different levels of sovereignty on a global, EU and Nordic country level

Isolate cloud environments on different sovereign levels to meet your data protection needs and enjoy intrinsic automated security to monitor compliance in real time

Support modern application architectures to prevent vendor cloud lock-in and enable application portability and independence across multi-cloud environments

Getting started is easy

It's time to harness the opportunity of digital transformation and gain the benefits of cloud technology while you meet the new world of data compliance laws head-on. Discover how our sovereign cloud services can help.
