Product Category Descriptions

ASSURANCE AND AUDITING

Independent audits and evaluation of services and methodologies that help organizations demonstrate compliance with internal policies, standards and regulatory requirements.

CONSULTING AND ADVISORY

Advisory services supporting strategic planning, organizational readiness, capability-building and implementation of governance programs.

POLICY AND COMPLIANCE

Tools and services focused on internal principles policy development, creation of internal and external governance boards, regulatory alignment and compliance support, documentation, risk identification and management, and internal governance and procurement processes.

TECHNICAL ASSESSMENTS AND EVALUATIONS

Tools and capabilities dedicated to analyzing data quality, robustness, model performance, safety and fairness, and other factors that impact the development and ongoing monitoring of AI systems.

AI Governance VENDOR REPORT 2026

V.1.0

Understanding the evolving AI governance vendor ecosystem

As organizations deepen their adoption of artificial intelligence, the need for clear and operational governance structures has never been more important.

A continual theme from our ongoing AI governance landscape research is that AI governance is not a single function, discipline or technology. Our diagram, "**Mapping and understanding the AI governance ecosystem,**" highlights the many different actors and functions involved in designing, developing and delivering AI governance. This includes external service providers, or AI governance vendors, as we will refer to this grouping of companies.

While AI governance companies started appearing in the marketplace as early as 2010, there has been a significant increase in the need for these types of services in recent years. This has led to a significant increase in companies launching AI governance businesses. While many of these efforts are net new, there are many companies that have expanded their business offerings to meet this new demand.

When we originally conducted research for the ecosystem map, we saw that AI governance vendors were grouped into two categories: 1) assurance and tools, and 2) service, compliance and advisory.

Since last year when we started this research, we saw a maturation of what AI governance service providers offer. That is why we have now expanded the types of service providers into four categories, which are described in further detail below. We anticipate that in future versions of this report these categories will continue to expand or be refined.

Before getting to the classification that we created, the types of offerings that we saw throughout the industry are described here:

A continual theme from our ongoing AI governance landscape research is that AI governance is not a single function, discipline or technology.

AI governance is multifaceted

In early 2025, we spoke with many companies working with the AI governance vendor community to both identify vendors and understand where they required their assistance. Many vendors were already known to IAPP since they are already part of our community. Finally, we did extensive research to identify AI governance vendors.

In order to know what to look for, we worked through the various tasks that AI governance vendors perform. We saw that across the market, organizations in the AI governance vendor community represent a wide range of services and specializations. These offerings span the full lifecycle of AI development and oversight, including:

- **Testing and evaluation:** Tools and services aimed at assessing safety, security, model performance, robustness and other metrics essential to responsible AI deployment.
- **Model and solutions development services:** Providers supporting the design, development and implementation of AI systems consistent with governance requirements.
- **System integration:** Organizations helping enterprises embed AI solutions in production environments while managing operational and compliance risks.
- **AI auditors:** Firms offering independent assessments of AI systems against emerging standards, regulations and organizational policies.
- **Investment and venture capital:** Funds directing capital toward technologies and companies focused on responsible AI and governance infrastructure.
- **Operations:** Platforms and services focused on monitoring, observability, incident response and the ongoing management of AI systems.
- **Legal services:** Law firms and advisory groups providing guidance on regulatory compliance, contractual risk, policy interpretation and emerging legal frameworks for AI.
- **Code and data review:** Providers supporting transparency, quality assessment, and documentation of data and software assets that underpin AI systems.
- **Data infrastructure and analytics:** Platforms enabling secure data management, lineage, quality assurance and analytics capabilities needed to support AI governance.
- **Process orchestration:** Tools that help organizations coordinate governance activities, workflows, documentation and review processes across teams.

Together, these capabilities demonstrate the breadth of functions required to govern AI effectively. No single provider or tool spans all of the above tasks.

From our discussions, organizations often use AI governance vendors to augment work that they cannot do on their own or provide an external perspective.

In many circumstances – primarily large and multi-national organizations – we saw several examples of organizations leveraging multiple vendors working in the different areas mentioned above to fulfil their governance needs.

To help others navigate what is available, it was important for us to group these various

tasks into broader categories. This helped us to develop a framework to describe the AI governance market.

A framework for understanding the market

To bring structure to this rapidly evolving ecosystem, the IAPP has grouped AI governance capabilities into four overarching categories. These categories reflect both the functional needs of organizations and the patterns emerging across market offerings:

1. **Policy and Compliance**
   Tools and services focused on internal principles policy development, creation of internal and external governance boards, regulatory alignment and compliance support, documentation, risk identification and management, and internal governance and procurement processes.

2. **Technical Assessments and Evaluations**
   Tools and capabilities dedicated to analyzing data quality, robustness, model performance, safety, fairness and other factors that impact the development and ongoing monitoring of AI systems.

3. **Assurance and Auditing**
   Independent audits and evaluation of services and methodologies that help organizations demonstrate compliance with internal policies, standards and regulatory requirements.

4. **Consulting and Advisory**
   Advisory services supporting strategic planning, organizational readiness, capacity building and implementation of governance programs.

This framework is not intended to be a rigid taxonomy. Many organizations operate across multiple categories, and the boundaries between them may shift as the market matures. Instead, these groupings are designed to provide practitioners with a practical structure for evaluating vendors and understanding where different capabilities fit.

As a policy neutral organization that seeks to advance the AI governance community, including vendors, we wanted to provide an objective view of the market as we currently understand it.

When developing our report, we relied primarily on publicly available information. It is likely that in future versions of this report, there will be more comprehensive public information or self-reporting from vendors to the IAPP, which will help to develop a stronger classification.

It was important for us to try to categorize AI governance vendors into this framework as we receive many questions about what AI governance vendors provide, what sectors they operate in, what regions they serve and what type of experience they have.

As a policy neutral organization that seeks to advance the AI governance community, including vendors, we wanted to provide an objective view of the market as we currently understand it.

Industry specialization

Part of our research was to look at the different industries in which these AI governance vendors were operating. While it is clear that some vendors have started to move toward specializing in various sectors, there are many that remain "cross-sectoral" or "unidentified" in our report. This could be due to the information that was publicly available or as a result of organizations not yet choosing a focus.

Through conversations with the vendor community, we found those that identify the domains in which they specialize often take place because of demand or due to the background of their teams. There are several vendors that indicated they were working in compliance in a particular sector previously and have now expanded to offer AI governance services.

> *The landscape of AI governance providers is dynamic and expanding. The organizations included in this analysis represent a starting point, not a definitive list.*

It remains an open question whether the market will evolve toward sector-specific offerings —particularly in highly regulated fields such as healthcare, financial services and public administration or if this trend of vendors working across all sectors will continue. It will remain an area of active observation for future iterations of our report.

Current focus on comprehensive providers

This report focuses only on comprehensive AI governance providers, rather than vendors offering isolated components such as single-purpose model evaluation tools or standalone data quality solutions. This distinction was important as we are starting to see more AI governance offerings embedded in tools like government-relation systems.

As the ecosystem continues to grow, distinguishing between full-stack governance offerings and specialized components will become increasingly important for practitioners who are navigating AI procurement and adoption decisions.

Help us build a more complete picture

The landscape of AI governance providers is dynamic and expanding. The organizations included in this analysis represent a starting point, not a definitive list.

If you or an organization you collaborate with offers comprehensive AI governance capabilities and is not yet represented, we encourage you to share details through the **submission form we have provided**. Your input will help us ensure that future reports reflect the breadth and diversity of the global AI governance ecosystem.

Next steps

It was clear from our research that the AI governance community remains an emerging sector. Specific needs from organizations appear to be in a steady state of flux. As such, we expect that this industry will continue to evolve, both in terms of the needs and offerings. We have not yet established a timeline for updating the report but anticipate to do so at least annually.

Get your free study guide

2021.ai

Location: Denmark

Number of employees: 65

Founded: 2016

Funded: Private

Sectors served: Legal; finance and banking; software and technology; manufacturing; life science; transportation; public sector

Description: We assist companies around the globe to accelerate their AI adoption by delivering the three key components that any organization needs to implement and operate AI successfully; models, platform, and governance.

TECHNICAL ASSESSMENTS AND EVALUATIONS

2B Advice LLC

Location: Germany

Number of employees: Unknown

Founded: 2003

Funded: Private

Sectors served: Not identified

Description: Ailance is an integrated risk management platform. On this platform, use existing solutions such as Ailance RoPA or build your own data protection or compliance solutions.

POLICY AND COMPLIANCE

Accedere

Location: United States

Number of employees: 16

Founded: 2017

Funded: Private

Sectors served: Not identified

Description: Accedere delivers expert SOC2 reports, ISO and cloud privacy certifications. With deep knowledge of frameworks across cybersecurity, cloud security, privacy and AI security, we help organizations of every size secure data, stay compliant and earn the confidence of clients, partners and regulators.

ASSURANCE AND AUDITING

Accenture Responsible AI Governance

Location: Global

Number of employees: Unknown

Founded: 2018

Funded: Private

Sectors served: Not identified

Description: Make responsible AI pervasive and systematic in the enterprise. Reduce risk through compliance, trust and value, and retained talent.

CONSULTING AND ADVISORY | POLICY AND COMPLIANCE

Activefence

Location: United Kingdom

Number of employees: 200

Founded: 2018

Funded: Private

Sectors served: Security

Description: We pioneered trust and safety for the world's largest platforms, building the expertise and technology to stop harmful content, behavior and abuse at scale. We bring proven experience to the era of generative AI, helping organizations build and scale AI-powered experiences with confidence.

TECHNICAL ASSESSMENTS AND EVALUATIONS

AI Ethics Lab

Location: United States

Number of employees: 2

Founded: 2017

Funded: Private

Sectors served: Not identified

Description: AI Ethics Lab brings together researchers and practitioners from various disciplines to detect and solve issues related to ethical design in AI. Through collaboration between computer scientists, practicing lawyers and legal scholars, and philosophers, the Lab offers a comprehensive approach to ethical design of AI-related technology. Our goal is to enhance technology development by integrating ethics from the earliest stages of design and development for the mutual benefit of industry and communities. Our work aims to provide ethics guidance to researchers, developers and legislators.

CONSULTING AND ADVISORY

AI Guardian

Location: United States
Number of employees: 3
Founded: 2013
Funded: Private
Sectors served: Not identified
Description: Our focus is on managing the risks that are unique to AI and its adoption so that all businesses can reach their full potential by leveraging AI. Ensuring that AI is safe, secure, monitored, compliant, auditable and ethically deployed across all teams will ensure maximum return on AI investments and lead to advancements that benefit those we serve.

TECHNICAL ASSESSMENTS AND EVALUATIONS

aiaudit.org

Location: Germany
Number of employees: 931
Founded: 2021
Funded: Non-profit/community
Sectors served: Cross-industry
Description: Community resources and guidelines for AI audits and governance practice.

ASSURANCE AND AUDITING

Armilla.ai

Location: Canada
Number of employees: Less than 50
Founded: 2021
Funded: Private
Sectors served: Cross-industry
Description: Lloyd's-backed pioneer of AI insurance, AI performance warranties and third-party evaluations of generative AI applications and AI agents.

ASSURANCE AND AUDITING

Arthur.Ai

Location: United States
Number of employees: Less than 50
Founded: 2018
Funded: Private
Sectors served: Cross-industry
Description: AI performance and governance platform for monitoring, evaluation, guardrails and model risk across LLMs/ML, supporting on-prem and data-local deployments.

TECHNICAL ASSESSMENTS AND EVALUATIONS

Asenion (formerly FAIRLY and Anch.AI)

Location: Canada
Number of employees: Less than 50
Founded: 2020
Funded: Private
Sectors served: AI management system offering risk intelligence and continuous compliance monitoring with policy controls, testing and reporting.
Description: AI management system offering risk intelligence and continuous compliance monitoring with policy controls, testing and reporting.

ASSURANCE AND AUDITING POLICY AND COMPLIANCE

BABL

Location: United Kingdom
Number of employees: Less than 50
Founded: 2018
Funded: Private
Sectors served: Finance/insurtech; HR; edtech; surveillance; autonomous vehicles; and defence
Description: AI audit and assurance firm providing technical assurance for high-risk AI systems. BABL AI also has an AI and Algorithm Auditor Certification.

ASSURANCE AND AUDITING

BCG

Location: Global

Number of employees: 33,000+

Founded: 1963

Funded: Private

Sectors served: Finance; insurance; healthcare; public sector; consumer; industrial goods; private investors and private equity; retail; technology

Description: BCG's Responsible AI offering helps organizations strategically develop, deploy and scale AI in ways that align with ethical values and business goals. Leveraging BCG's strengths in strategy, change management and technology, the approach accelerates progress toward responsible AI maturity while maximizing value from AI investments. Our five-pillar Responsible AI framework—covering strategy, governance, technology, processes and culture—is tailored to each organization's unique context. BCG X's GenAI Evaluator strengthens this with rigorous evaluation and risk management to ensure AI and agentic systems are safe, secure and effective at scale.

CONSULTING AND ADVISORY | POLICY AND COMPLIANCE | TECHNICAL ASSESSMENTS AND EVALUATIONS

CalypsoAI

Location: United States

Number of employees: Less than 50

Founded: 2018

Funded: Private

Sectors served: Cross-industry

Description: LLM guardrails, evaluation and security controls; enterprise gateways and content policy enforcement.

TECHNICAL ASSESSMENTS AND EVALUATIONS

Chatterbox labs

Location: United Kingdom

Number of employees: Less than 50

Founded: 2010

Funded: Private

Sectors served: Cross-industry

Description: Patented AIMI platform built to address the unintended consequences of AI. AIMI is deployed in many of the largest enterprises and governments around the world. AIMI delivers quantitative AI risk metrics to ensure AI data and models are safe, secure, transparent and in line with current and emerging global AI regulations.

TECHNICAL ASSESSMENTS AND EVALUATIONS

Clarip

Location: United States
Number of employees: 34
Founded: 2016
Funded: Private
Sectors served: Not identified

Description: Clarip is a new way for companies to engage with consumers on a very personal level. By bringing clarity and transparency to the data collection process, we help build "trust," which is critical for any relationship, business or otherwise. Consumers for the first time, can easily understand what data is being collected and shared about them, all in one place.

TECHNICAL ASSESSMENTS AND EVALUATIONS

code4thought (C4T)

Location: United Kingdom
Number of employees: 13
Founded: 2017
Funded: Private
Sectors served: Not identified

Description: Code4thought is a technology company with a unique purpose, to render technology transparent for both large-scale software and AI-based systems, either in collaboration with international companies, or by creating our own technology founded on internal research and development activities.

CONSULTING AND ADVISORY

Collibra, Inc.

Location: United States
Number of employees: 1000
Founded: 2008
Funded: Private
Sectors served: Not identified

Description: Collibra delivers a complete platform for data and AI governance, giving teams the visibility, control and confidence to turn data into a trusted asset.

CONSULTING AND ADVISORY POLICY AND COMPLIANCE

Credo AI

Location: United States

Number of employees: Less than 100

Founded: 2020

Funded: Private

Sectors served: Financial services; technology; healthcare/life sciences; energy; public sector/government

Description: Credo AI is the trusted operating layer for enterprise AI governance—enabling organizations to move fast with AI while staying secure, compliant, and audit-ready. Designed for generative and agentic AI, Credo AI unifies AI inventory, risk workflows, policy-based controls, evidence automation, and reporting across models, copilots, agents, and third-party AI vendors. The platform operationalizes governance across the enterprise through deep integrations with data, security, and AI systems, and is delivered as SaaS or on-prem for enterprises and governments.

CONSULTING AND ADVISORY | POLICY AND COMPLIANCE | TECHNICAL ASSESSMENTS AND EVALUATIONS

Data Robot

Location: United States

Number of employees: Less than 1000

Founded: 2012

Funded: Private

Sectors served: Cross-industry

Description: Enterprise AI/ML platform for model development, deployment, monitoring and MLOps, offering governance features for regulated use.

TECHNICAL ASSESSMENTS AND EVALUATIONS

Databricks

Location: United States

Number of employees: 8226

Founded: 2013

Funded: Private

Sectors served: Not identified

Description: Our focus is on supporting early- and growth-stage companies that are empowering AI in innovative ways on top of or alongside the Databricks Data Intelligence Platform. These companies share our vision for an open ecosystem and our commitment to harnessing the power of data intelligence to create the next generation of data and AI-powered companies.

POLICY AND COMPLIANCE | TECHNICAL ASSESSMENTS AND EVALUATIONS

DataGuard

Location: United Kingdom
Number of employees: 218
Founded: 2018
Funded: Private
Sectors served: Not identified

Description: Our AI-powered platform automates repetitive tasks, simplifies compliance with complex regulations and frameworks and helps to mitigate risks before they disrupt businesses. Our in-house experts offer additional support, advising organizations on all their security and compliance challenges now and in future.

TECHNICAL ASSESSMENTS AND EVALUATIONS

Deeploy

Location: Netherlands
Number of employees: 36
Founded: 2020
Funded: Private
Sectors served: Not identified

Description: We focus on governance, transparency, and trust, built on three core commitments: Empowering teams, Ensuring AI transparency, and Advancing Responsible AI.

CONSULTING AND ADVISORY

Deloitte Digital

Location: United Kingdom
Number of employees: 10000
Founded: 1989
Funded: Private
Sectors served: Not identified

Description: Deloitte Digital harnesses the power of creativity, insight and innovation to help our clients grow and improve. Together we create compelling experiences for customers and citizens that align with brand ambitions, increase loyalty, drive efficiency and profitable growth.

CONSULTING AND ADVISORY

Domino.ai

Location: United States
Number of employees: 118
Founded: 2013
Funded: Private
Sectors served: Not identified

Description: Domino is the enterprise AI platform trusted by the largest AI-enabled companies and major government agencies. Our products enable thousands of data scientists to develop better medicines, grow more productive crops, adapt risk models to major economic shifts, build better cars, improve customer support or simply recommend the best purchase to make at the right time.

POLICY AND COMPLIANCE

Encord

Location: United Kingdom
Number of employees: 130
Founded: 2020
Funded: Private
Sectors served: Not identified

Description: A comprehensive AI data platform that scales with frontier model development. Consolidate annotation, curation and model validation into a unified solution. Eliminate the infrastructure complexity that slows down AI teams building production-grade systems.

TECHNICAL ASSESSMENTS AND EVALUATIONS

Enzai

Location: United Kingdom
Number of employees: 2
Founded: 2021
Funded: Private
Sectors served: Not identified

Description: We combine decades of experience in AI governance, regulatory compliance and cutting-edge tech to help organisations navigate complexity with confidence. From global enterprises to regulators and emerging tech leaders, we partner to ensure AI is not just powerful—but responsible, ethical and scalable.

TECHNICAL ASSESSMENTS AND EVALUATIONS

Ethically Aligned AI

Location: Canada

Number of employees: Less than 10

Founded: 2023

Funded: Private

Sectors served: Not identified

Description: We're on a mission to help organizations build better AI systems and help people to make sound choices in selecting responsible AI-enabled products or services. Our vision is to create a more just and equitable world by improving the outcomes of AI technologies used in both the public and private sectors.

CONSULTING AND ADVISORY

Ethyca

Ethyca

Location: United States

Number of employees: 46

Founded: 2018

Funded: Private

Sectors served: Not identified

Description: Ethyca was founded to build the trusted data layer for enterprise and AI: where privacy, governance and policy enforcement are integrated directly into systems, not bolted on after the fact. As AI adoption accelerates, the stakes for responsible data use grow exponentially. Organizations need more than guidelines. They need data infrastructure that turns policy into practice, automatically and at scale.

POLICY AND COMPLIANCE

Eticas consulting

eticas.ai

Location: Spain

Number of employees: 14

Founded: 2012

Funded: Private

Sectors served: Not identified

Description: We've built a global record in AI assurance, applying a socio-technical lens that links algorithms with social context. Our team works across four continents, combining consultancy and software to help organisations anticipate regulation, manage risk and lead responsibly.

ASSURANCE AND AUDITING

EY: Trusted AI Platform

Location: United Kingdom

Number of employees: Unknown

Founded: 1989

Funded: Private

Sectors served: Not identified

Description: At EY, our purpose is building a better working world. The insights and quality services we provide help build trust and confidence in the capital markets and in economies around the the world. We develop outstanding leaders who team to deliver on our promises to all our stakeholders. In so doing, we play a critical role in building a better working world for our people, for our clients.

CONSULTING AND ADVISORY

Fairlearn (Microsoft)

Location: United States

Number of employees: Unknown

Founded: 2018

Funded: Open source

Sectors served: Not identified

Description: Fairness of AI systems is about more than simply running lines of code. In each use case, both societal and technical aspects shape who might be harmed by AI systems and how. There are many complex sources of unfairness and a variety of societal and technical processes for mitigation, not just the mitigation algorithms in our library.

TECHNICAL ASSESSMENTS AND EVALUATIONS

Fathom

Location: United States

Number of employees: Unknown

Founded: 2014

Funded: Non-profit

Sectors served: Not identified

Description: An independent non-profit whose mission is to find, build, and scale innovative governance solutions for AI that foster public trust in AI, while unleashing the power of American innovation. Fathom is funded by philanthropists, and our donors have no influence over our strategy and approach. We do not take donations from corporations or foreign entities associated with countries of concern.

POLICY AND COMPLIANCE

Fiddler AI

Location: United States
Number of employees: Less than 100
Founded: 2018
Funded: Private
Sectors served: Cross-industry
Description: Resources on how to think about fairness as sociotechnical, and how to use Fairlearn's metrics and algorithms while considering the AI system's broader societal context.

TECHNICAL ASSESSMENTS AND EVALUATIONS

ForHumanity

Location: United States
Number of employees: Less than 10
Founded: 2016
Funded: Non-profit
Sectors served: Cross-industry
Description: Non-profit creating audit criteria and certifications for AI/algorithmic systems; auditor training.

ASSURANCE AND AUDITING

Holistic AI

Location: United Kingdom
Number of employees: Less than 200
Founded: 2020
Funded: Private
Sectors served: Cross-industry
Description: AI governance platform and independent audits; risk management, policy alignment and red-teaming.

ASSURANCE AND AUDITING

HCLTech: Responsible AI Advisory Services

Location: Global

Number of employees: 220,000+

Founded: 1976

Funded: Private

Sectors served: Supports all major verticals

Description: HCLTech is a global technology company, delivering capabilities centered around AI, digital, engineering, cloud and software, powered by a broad portfolio of technology services and products. We work with clients across all major verticals, providing industry solutions for financial services, manufacturing, life sciences and health care, high tech, semiconductor, telecom and media, retail and CPG, mobility and public services. We offer end-to-end responsible AI services, guiding clients through their AI journeys, from strategy design to continuous optimization.

POLICY AND COMPLIANCE

IBM: AI Governance Solutions and Services

Location: Unknown

Number of employees: 500

Founded: 2018

Funded: Private
