

Schneider is ISO 9001: 2015 certified. ISO 9001 (QMS) is the international standard for quality management systems. It mainly focuses on seven quality management principles, managing relationships, making decisions based on evidence, leadership, improvement, employee contribution, and prioritizing customer needs. It manages and improves companies work that meets customer requirements and provides extra benefits to the business.

This ISO standard shows that a business is recognized by global standards which increase trust and outlines the Factors for a Good Quality Management System.

Overall, ISO 14001 is based on ISO 9001, with changes and additions made that focus on environmental management. While we are not ISO 14001 or ISO 45001 certified, we are RCMS (Responsible Care Management System) certified. The RCMS initiative is a technical standard created to enable America's leading chemical companies to achieve even higher standards of environmental, health, safety and security performance and generate greater value for their businesses. Like ISO this is a 3rd party certification that is annually audited. Both Bulk and SCDM are certified and I think we can coat tail off of their certs to encompass the need for QHSE Certification.

In short, QHSE certification showcases excellence, drives continuous improvement, and reduces risk across an organization. It's a way to prioritize quality, safety, and environmental responsibility. This is what Schneider's QMS and RCMS certifications outline.
