

Electrical FSR: Find a training provider

Recognized electrical training providers

Recognized electrical training relates to the electrical Field Safety Representative (FSR) certificate of qualification program. Training providers may offer:

- **FSR Certification Education** which is a recognized course on the application of electrical codes and standards that will help you meet the examination requirements for various [FSR Classes](#); and/or:
- FSR Renewal Continuing Education which is a recognized course that will help you meet the requirements to [renew](#) your FSR certificate of qualification.

For course availability, or to learn about and register for a course, contact the training provider directly.

FSR applicants for SA (security alarm) and LO (low energy) should inform the training provider that they wish to take a course specifically designed for their restricted FSR class, **not** the course for FSR Class A, B, or C.

Are you an Alberta Master Electrician? Technical Safety BC accepts continuing education courses approved by the Alberta Safety Codes Council. You may qualify to renew your FSR qualification if you have completed a course from their [approved list](#) of training providers.
