

DIRECTIVE

RECOGNIZED CERTIFICATES FOR TRANSFER OF PROPANE

This Directive is being issued by a provincial safety manager pursuant to section 30 of the Safety Standards Act.

Date of Issue: June 23, 2017

Directive No: D-GA-2017-01

Revision: 01

General Details

Individuals who transfer propane must have a certificate of qualification resulting from the successful completion of a training course recognized and approved by a Provincial Safety Manager. A recognized training course must have been submitted for review and acceptance to a Provincial Safety Manager in order to be listed in this Directive. All training must be delivered by individuals certified, authorized or employed by the related Training Body or provider. Training providers identified in this document have been approved by a Provincial Safety Manager.

Specific Details

A training course must be specific to the job skills required to operate or handle the transfer equipment and containers specific to that propane transfer type. As indicated in section 5.2.1 of CSA B149.2 - Propane storage and handling code, propane shall only be transferred from one container to another, by an individual that is the holder of an applicable certificate of qualification recognized by the authority having jurisdiction. These certificate types are to be held in a valid current status (not expired) in order for an individual to perform the related regulated work. The holder of a recognized certificate must, upon request of a safety officer, produce the certificate or appropriate wallet card for inspection.

As noted, the following certificates are recognized by the Provincial Safety Manager. Please confirm the correct scope of work with the course provider to assure you obtain the correct certification for the specific transfer type.
