

Rapid7 Managed Vulnerability Management

Build a world-class vulnerability management program with complete coverage of your attack surface

As your business and IT infrastructure grows in volume and complexity, so does your attack surface. It's no longer enough to just implement the best technology to proactively identify and prioritize what needs to be fixed (that's the easy part). Developing a true vulnerability management program requires time and resources to prioritize what's most critical in the context of your business, remediate vulnerabilities, and establish sustainable processes for working within and across teams.

Rapid7 [Managed Vulnerability Management](#) (Managed VM) was designed to offload day-to-day operations to our vulnerability management experts and extend coverage across the attack surface so you can build a successful program. Managed VM provides tailored recommendations to manage, execute, and optimize remediation across your environment and lower your overall risk exposure. By pairing our team of experts with our industry-leading technology, [InsightVM](#), you can develop a complete vulnerability management program to stay ahead of the latest attacker trends and proactively defend your perimeter.

Service benefits:

Build a sustainable vulnerability management program

Scanning is an important part of vulnerability management, but just *identifying* vulnerabilities isn't enough to measurably reduce risk. By engaging our experts, you get the support and guidance you need to build, execute, and optimize a comprehensive program.

- Offload your ongoing scans operations, so you that you can focus on overall strategy.
- Get visibility into vulnerabilities in your growing attack surface, including mobile, cloud-based, and remote assets.
- Easily facilitate stakeholder engagement across teams and executive sponsors with prioritized remediation guidance.

Think like an attacker, prioritize as a business

Unlike traditional MSSPs that simply manage technology, Rapid7 Managed VM helps you develop, tune, and optimize a holistic vulnerability management program that's tailored to your unique business and risk tolerance.

- Identify vulnerabilities that have the most dramatic impact on your risk exposure with prioritized recommendations for remediation.
- Leverage Rapid7's proprietary threat intelligence to get ahead of the latest threats and proactively remediate them before impact.
- Know you're adapting to the changing threat landscape with automatic logic and rule updates.

Measure your program's success

Measure and track the ROI of your vulnerability management efforts. Align your priorities across the business, and track progress against goals.

- Continually measure risk reduction and optimize your program to strengthen your overall security posture.
- Analyze security trends over time to lower the risk of a breach.
- Communicate the ROI of the program to executives and board-level stakeholders.

Level up your defense

Our mission is to accelerate your security program—no matter your current maturity level. From your dedicated security advisors to our vulnerability management SOC, consider us an extension of your team.

- Receive tailored service based on deep knowledge and understanding of your environment, threat landscape, and security goals.
- Establish repeatable processes for collaborative remediation across the business.
- Mature your program and advocate for it to the CISO, Board, and Executive teams under the guidance of our security advisors.
