

# COMMAND YOUR ATTACK SURFACE WITH EXPOSURE COMMAND

Exposure management represents a shift in the way organizations monitor and protect their attack surface. Organizations that embrace this approach are able to continuously monitor risks from any asset, across every environment, from on-prem to cloud, helping their teams accurately prioritize remediation steps on the systems that are most critical to the business. By reducing noise and optimizing their approach to vulnerabilities, these organizations show impactful ROI to the C-suite and the board.

## WHY EXPOSURE MANAGEMENT?

**↑ 34% → 20% OVERALL**

According to the Verizon 2025 Data Breach Investigations Report: "Exploitation of vulnerabilities as an initial access step for a data breach grew by 34%, now accounting for 20% of breaches.

Having a truly complete view of your attack surface — knowing where all of your vulnerabilities are, no matter what assets they are on — is crucial to closing that gap. Exposure Command does that.

**46%** The DBIR Report also shows that 46% of breaches came from non-enterprise assets. Assets your traditional VM program remains blind to.

## A UNIFIED APPROACH TO RISK

The attack surface is vast and growing. Your team is pulling in data from many environments, assessing many risk types, and remediating multiple vulnerabilities. Exposure Command unifies your view, your risk assessment, and in many instances, your actions into:

### 1 UNIFIED SOURCE OF TRUTH

Continuously identify, inventory, and monitor your entire attack surface—cloud, on-prem, and everything in between.

### 1 ENRICHED RISK SCORE

Exposure Command combines AI, threat intel, and exploitability data into a single, context-rich score. This helps teams confidently prioritize what matters most.

### 1 ACTION = MANY FIXES

Group exposures by root cause and resolve systemic issues with a single remediation action.

## EFFICIENCY UNLOCKED

**290+ BUILT-IN INTEGRATIONS**

Exposure Command works where you do. With nearly 300 integrations (and more on the way) security teams can seamlessly integrate exposure remediation into current workflows.

Exposure Command is an efficiency powerhouse. It works where you do, how you do, and can return an ROI the C-suite and the board will notice.

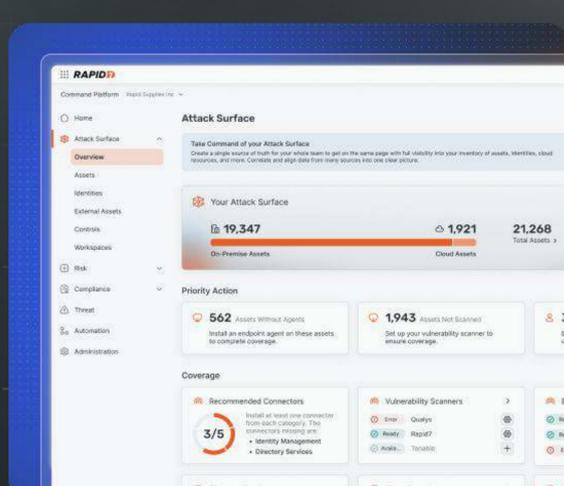

**96 HOURS SAVED**

On average, Rapid7 Exposure Command customers saved 96 work hours per month, freeing the team to focus on higher value tasks.

## CONFIDENCE THAT SCALES

Exposure management programs like Exposure Command have high confidence levels from security professionals.

More than 4 out of 5 of security professionals surveyed have confidence in their ability to respond to cyber risks thanks to their exposure management program. Roughly 5% say the opposite.

## BACKED BY ANALYSTS

By 2026, organizations that prioritize their security investments based on a continuous exposure management program will be

**3X LESS LIKELY TO SUFFER A BREACH.**

Gartner® "How to Manage Cybersecurity Threats, Not Episodes" Kasey Panetta; August 21, 2023.

# RAPID7 EXPOSURE COMMAND GIVES YOU UNIFIED, CONTINUOUS VISIBILITY AND CONTROL OVER YOUR ATTACK SURFACE—ACROSS EVERY ASSET, ENVIRONMENT, AND RISK.

Exposure management is the future of not only vulnerability management, but the way in which organizations view and secure their entire environment across the board. These are just a few highlights of how Exposure Command will help you take command of your attack surface.
