

# KEY TAKEAWAYS

## ACR Ultrasound Conference

ACR  
**Convergence**  
Where Rheumatology Meets

### **Thank you for making the 2024 Ultrasound Conference a huge success.**

The meeting was the first offering of its kind in five years at the ACR and featured world-class lectures, panel discussions and valuable hands-on learning experiences with networking opportunities and interactive sessions.

### **Your fellow Ultrasound Conference participants have identified the following key takeaways from the symposium:**

- Diagnostic ultrasound knowledge that will improve patient care
- Knowledge to improve interpreting sonographic findings
- Opportunities for individual teaching in small groups and real-world applications on patients
- Expert lectures geared towards those with and without musculoskeletal ultrasound experience

### **Feedback from the 2024 Meeting**

“The sessions were engaging, being able to learn didactically and then immediately translate that into hands on practice was perfect.”

“Excellent number of patients with rheumatic musculoskeletal conditions for scanning and give wide overview of different pathologies. It provided great individual teaching from each instructor and able to pick up several points that can be applied to daily musculoskeletal ultrasound practice.”

“This was an amazing course that was well staffed with very approachable and experienced instructors. Though the days were long, the breakout sessions to practice and demonstrate ultrasound with a lot of hands-on practice was great and well scheduled throughout the day to allow practice and demonstration about what we just heard about.”

“I learned new techniques in MSK US for Sjogren’s Lung and Temporal artery—I had excellent networking with faculties.”

### **Additional Resources for Continued Learning**
