2024 Quality Benchmarks

What are CMS Benchmarks?

Benchmarks are the point of comparison CMS establishes and uses to score the quality measures you submit for MIPS. When you submit measures for the Traditional MIPS and/or MVP quality performance category, your performance on each measure is assessed against CMS’ benchmark for that performance year to determine how many points the measure will earn. CMS establishes benchmarks specific to each collection type, which may result in a measure having multiple benchmarks. For example, CQM134 has a benchmark, but eCQM134 does not have a benchmark for 2024.

Why are CMS Benchmarks important?

CMS will award a range of points from 1 to 10 for 2024 measures. The points available are reflected in the CMS Benchmark file [See below CMS Benchmark Resources]. This file can be overwhelming; so RISE registry has created a summary of the 2024 benchmarks for each measure in RISE registry.

You are strongly encouraged to review the [2024 RISE Quality Benchmarks](#) before selecting quality measures to focus on and potentially report for 2024 MIPS. Reviewing the benchmarks allows practices to select their measures based off **a)** how they feel they will perform on measures, and **b)** the potential MIPS points they will receive based off performance.

Some quality measures are topped-out. This means that CMS has determined there is little to no room for quality improvement, and the measure will be awarded a limited range of points, with 7 points maximum if 100% performance is reported.

Instructions to Utilize the Benchmarks

- Open the [2024 RISE Registry Quality Benchmarks](#)
- Select the benchmark for the measure and collection type you’re interested in or reporting.
- Identify the benchmark decile that maps to your estimated performance in that measure.
- See the range of points available for that decile.

Examples of Scoring

- QCDR measure ACR10 with a performance rate in Decile 6 [43.06-49.99%] can earn **6–6.9** points.
- QCDR measure ACR16 does not have a benchmark, therefore this measure will receive 0 points unless it is submitted by a small practice.
 - Small practices with fewer than 15 clinicians will continue to earn 3 points for measures without a benchmark.
- CQM177 with a performance rate in Decile 7 [99.62-99.99%] or in Decile 10 [100%] can only earn **7 points** due to it being topped out and capped at 7 points max.
- CQM487 does not have a benchmark. As this measure was added in PY2023, it is subject to **5 points** if 75% data completeness is met.

2024 Quality Measures in RISE

These quality measures are available for quality performance tracking in the 2024 performance year via the ACR RISE registry. The quality measures in the registry are a part of the 2024 Quality Payment Program (QPP) and are reportable for [traditional Merit-based Incentive Payment System \(MIPS\)](#) and/or the [Advancing Rheumatology Patient Care MIPS Value Pathway \(MVP\)](#).

ACR RISE QCDR Measures

The ACR developed the following rheumatology-specific measures that are exclusively available and reportable for MIPS via the ACR RISE registry. To learn more about the QCDR measures, access the [2024 RISE Qualified Clinical Data Registry \(QCDR\) Measure Specifications](#).
