

2024 LOS Report – Technical Memorandum

Hillsborough County is updating the 2020 Level of Service (LOS) Report, which assesses major roadways in the Hillsborough County network. The report was updated for 2024 conditions using the most recent available traffic count data (as provided by Hillsborough County, Hillsborough Transportation Planning Organization (TPO), and FDOT), as well as the current guidelines outlined in the FDOT 2023 Multimodal Quality/ Level of Service (Q/LOS) Handbook. The LOS report update includes Hillsborough County and Florida Department of Transportation (FDOT) roadway facilities and does not include City of Tampa and City of Plant City.

The following is an outline of the data sources and assumptions for the 2024 LOS Report.

Accommodation Statement

In accordance with the requirements of title II of the Americans with Disabilities Act of 1990 ("ADA"), Hillsborough County will not discriminate against qualified individuals with disabilities on the basis of disability in its services, programs, or activities. Persons with disabilities who need an accommodation for this document should email the Hillsborough County ADA Officer or call (813) 276-8401; TTY: 7-1-1.

County Data

- Data source
 - Adams Traffic, Inc.
 - 193 Count Stations
- Date
 - November 2023 to May 2024
 - 2-day average
- Application
 - County count station data was spatially joined to 2020 LOS Report segments.
 - Segments with multiple County count stations were split at the logical breakpoint based on the corridor context and volume data.
 - Unmatched County count stations were assigned to arterial or collector roadways that were added to the 2024 LOS Report (see the New Segments section for list of added segments).
 - County count station volumes that did match with a segment were assigned to the adjacent segments, if applicable, based on the corridor context and historical volumes. The segments listed below were assigned the adjacent County count station.

- 2023 County count station data was applied to County maintained segments if there wasn't available TPO count station data along the segment. 2024 County count station data was applied to County maintained segments regardless of available TPO count station data. TPO data is described in the next section.
 - As a result, 203 segments in the 2024 LOS Report were assigned County count station data.
- Seasonal Adjustment:
 - A Seasonal Factor was applied to the collected data based on the FDOT 2023 Hillsborough Countywide factor. The Seasonal Factor sheet is provided as an attachment in the appendix.
- County segments that did not match with a County or TPO count station nor were adjacent to applicable segments were assigned the 2021 volume from the 2020 LOS Report. 147 County segments were assigned the 2021 volume.

TPO Data

- Data source
 - National Data & Surveying Services (NDS) and Benesch
 - 411 TPO count stations

FDOT Data

- Data source/Date
 - 2024 Historical AADT Report; FDOT Transportation Data & Analytics Office (URL: <https://www.fdot.gov/statistics/gis>)
 1. Line shapefile (<https://ftp.fdot.gov/file/d/FTP/FDOT/co/planning/transtat/gis/shapefiles/aadt.zip>)
 2. Portable traffic monitoring sites (<https://ftp.fdot.gov/file/d/FTP/FDOT/co/planning/transtat/gis/shapefiles/ptms.zip>)

Peak Hour Directional Volumes

County and TPO Data

- Peak hour directional volumes were identified from the collected data based on the maximum bi-directional volumes within the peak-hour periods (7am to 9am and 4pm and 6pm)
- The calculated maximum (AM or PM) peak-hour directional volumes are used in the 2024 LOS Report.

FDOT

- Peak hour directional volumes were calculated based on data in the 2024 Historical AADT Report. The D and K factor are unique to each monitoring site provided in the data from FDOT Transportation Data & Analytics Office (URL: <https://www.fdot.gov/statistics/gis>)
 - $AADT \times D \text{ Factor} \times K \text{ Factor}$

Context Classification

County

- Data source
 - Hillsborough County Context Classification
 - GIS_2024LOSReport.gdb (ContextClassification)
 - Field name: Context Class
- Application
 - 2020 LOS Report segments were assigned the County context class defined within its limits. If the context class varied within the segment limits, the segment was generally split where the context class changed. Segments less than 0.4 mile were reviewed to determine if the segment should be split or remain connected and assigned the context class that defines the majority of the segment. This methodology is consistent with guidance provided in Section 3.3 of the FDOT 2023 Multimodal Quality/Level of Service Handbook.
- Segments in 2020 LOS Report and segments added to the 2024 LOS Report that did not have an assigned context classification were reviewed and defined by the County as shown in the list below. The context classification for Segment 37.03 was modified from C3R to C3C because there is no 8-lane base volume for C3R.

 - Shapefile: Preliminary_Context_Classification_TDA
 - Field name: P_CCTXTCLS
- Application
 - 2020 LOS Report segments were assigned the FDOT context class defined within its limits. If the context class varied within the segment limits, the segment was generally split where the context class changed. Segments less than 0.4 mile were reviewed to determine if the segment should be split or remain connected and assigned the context class that defines the majority of the segment. This methodology is consistent with guidance provided in Section 3.3 of the FDOT 2023 Multimodal Quality/Level of Service Handbook.
- Segments in the 2020 LOS Report that did not have an assigned FDOT context classification were reviewed and defined based on the adjacent segments and corridor context as shown in the list below. The context classification for Segment 503.02 modified from LA to C3R because the segment was classified as an urbanized, state signalized arterial in 2020.
