

Our Commitment to You

Our employees support local schools, first responders, and nonprofits across Blount County.

- \$3.5 million+ raised for Cystic Fibrosis Research with Cure Finders from our Sporting Clays Tournament
- Home to Special Growers which provides job opportunities for young adults with special needs
- Dedicated 24+ acres for Vulcan Fields, partnering with Blount United Soccer Club for youth development

Building for the Future

Our \$12.5 million+ Optimization and Benefits Plan will update a nearly 20-year-old site plan to enhance the overall appearance and experience for all our neighbors and create lasting benefits for the community.

We will continue to responsibly use our land to serve the community in many impactful ways beyond making the products that are vital to the local economy.

Proposed Western Landscaped Berm

We are committed to being a responsible neighbor and working together. If you have questions, comments or feedback, please contact our community line at (629) 910-7627 or scan the QR code.

MARYVILLE QUARRY

REACHING HIGHER

OUR COMMITMENT TO YOU

Vulcan
Materials Company
Maryville Quarry

Committed to You & Blount County

We call it Doing The Right Thing, The Right Way, At The Right Time - this is **The Vulcan Way**. Since the 1940's, Maryville Quarry has been an important economic engine in the region and an active community partner in Blount County.

We produce construction aggregates that are the building blocks for our roads, bridges, homes, hospitals, schools, office buildings, and places of worship.

Snapshot

1940's
year operations started

22
full-time employees

\$19 million
annual economic benefit

\$6 million+
annual average investment
operational & capital expenses

\$100,000+
annual spend with Blount County
businesses and organizations

schools and organizations since 2021

105
employees and retirees live
in Blount County

\$79,000+
property taxes paid to fund local
education and services (2024)

Our Commitments

Meet/exceed local, state
and federal laws & regulations

Preserve and protect
local water resources

Industry-leading safety
performance

Maintain controls &
procedures to protect the air

Timely, transparent monitoring
and reporting with the City

Buffer areas surround
the site

We Make Big Rocks Into Small Rocks

What we do is simple. But it has to be done The Right Way.

Engineers design mine plans which serve as the blueprints for the entire operation. Our **inventory** is the rock in the ground. It is mined at a rate based on **customer demand** which is largely tied to the economy.

Using the mine plans, **licensed and trained technicians**, adhering to specific depths and patterns, drill holes into the rock.

We **safely and precisely** remove a specific amount of rock from the ground through controlled and engineered blasts that last less than a second.

Loader and haul truck **drivers** transfer the rock to the primary crusher, to make smaller rocks.

The rock is transported via a **conveyor** to the processing plant where it is processed, sized and sorted to meet customer **specifications**.

Product is **shipped** via local customer trucks.

Trucks travel through a wheel wash, are weighed, ticketed and tarped before traveling to job sites and **customers** for use in homes, businesses, roads and bridges.

Construction aggregates drive our economy. How much rock do we need?

38,000 tons

builds one lane-mile of a
four-lane interstate highway

400 tons

builds the
average home

94%

amount of aggregate
in asphalt pavement

80%

amount of aggregate
in concrete
